PUMPS, MOTORS, HYDROPHORES,
INVERTERS, CONTROLLERS

DAMBAT IS A DYNAMICALLY DEVELOPING POLISH MANUFACTURER OF WATER PUMPS AND FITTINGS SOLD UNDER IBO BRAND.

The company started its activities in 1999 and from the very beginning it based its development on understanding clients' needs providing them with high quality products. With experience and knowledge of qualified personnel and regular product development, Dambat became a significant manufacturer of water pumps in the European market.

In order to continue constant development, we cooperate with world-renowned manufacturers of water devices and equipment, while making our offer more attractive.

In cooperation with our Italian partners, we sell top quality

tanks, pumps and deep well motors. Benefiting from the latest technology and high-quality materials, IPRO products ensure long-lasting, safe and faultless operation. The range of products with such features and individual approach enabled us to acquire distributors of our devices in the majority of European countries and beyond.

With the experience gained over the years in line with knowledge and understanding of the importance of reliability, Dambat delivers top quality products to all customers who decide to choose our offer.

MH PRO

BJ

Single-stage, self-priming, centrifugal surface pump, equipped with a system increasing the suction capacity thanks to the use of a Venturi tube. Designed for pumping clean, cold water from own intakes and for increasing pressure. This pump model is used for water supply to houses, recreational plots and for irrigation.

CHARACTERISTICS:

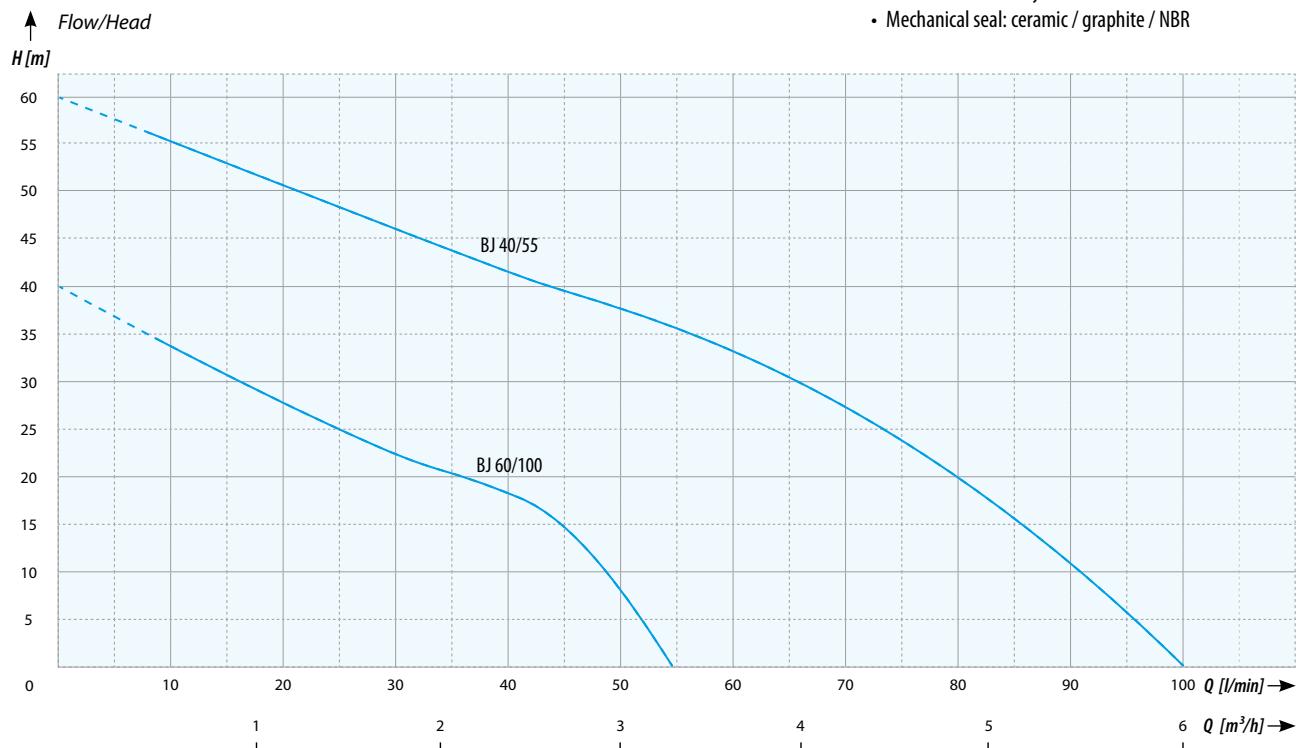

- Suction capacity from a depth of max. 9m
- Small dimensions of the pump
- The highest quality materials
- Possibility to work with a vessel or hydropore automats (e.g. PC, SK)
- Thermal protection built into the motor winding
- 24-month warranty
- Warranty and post-warranty service

TECHNICAL DATA:

- Maximum liquid temperature: 70°C
- Maximum ambient temperature: 50°C
- Insulation class: F
- Mode of operation: continuous
- Ingress protection: IP55
- Motor speed: 2850 RPM
- Maximum pressure: 1.0 MPa

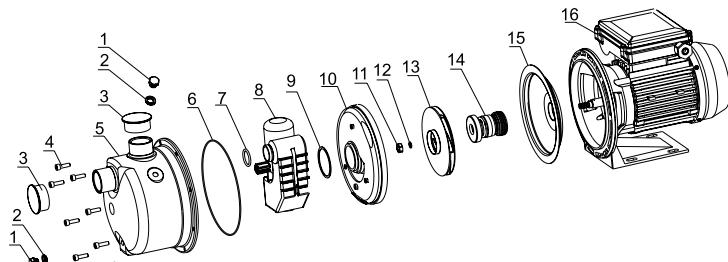

MATERIALS:

- Pump housing: AISI 304 stainless steel
- Shaft and rotor: AISI 304 stainless steel
- Impeller: noryl
- Inter-wall: AISI 304 stainless steel
- Diffuser / blade: noryl
- Mechanical seal: ceramic / graphite / NBR

NAME	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Suction lift (m)	Amperage (A)	Inlet/outlet [inch]	Dimensions L/H/W (cm)	Weight (kg)

IWH

The pump for pumping of clean cold water from own intakes and for increasing pressure. IWH is a single-stage self-priming centrifugal surface pump equipped with the Venturi tube system for increased suction capacity. Sections of pump body and shaft that come in contact with water are made of stainless steel (INOX). The pump is manufactured to the highest quality standards in terms of the design and materials used. The pump has a power cable with a plug, and the pump motor is provided with thermal protection.

CHARACTERISTICS:

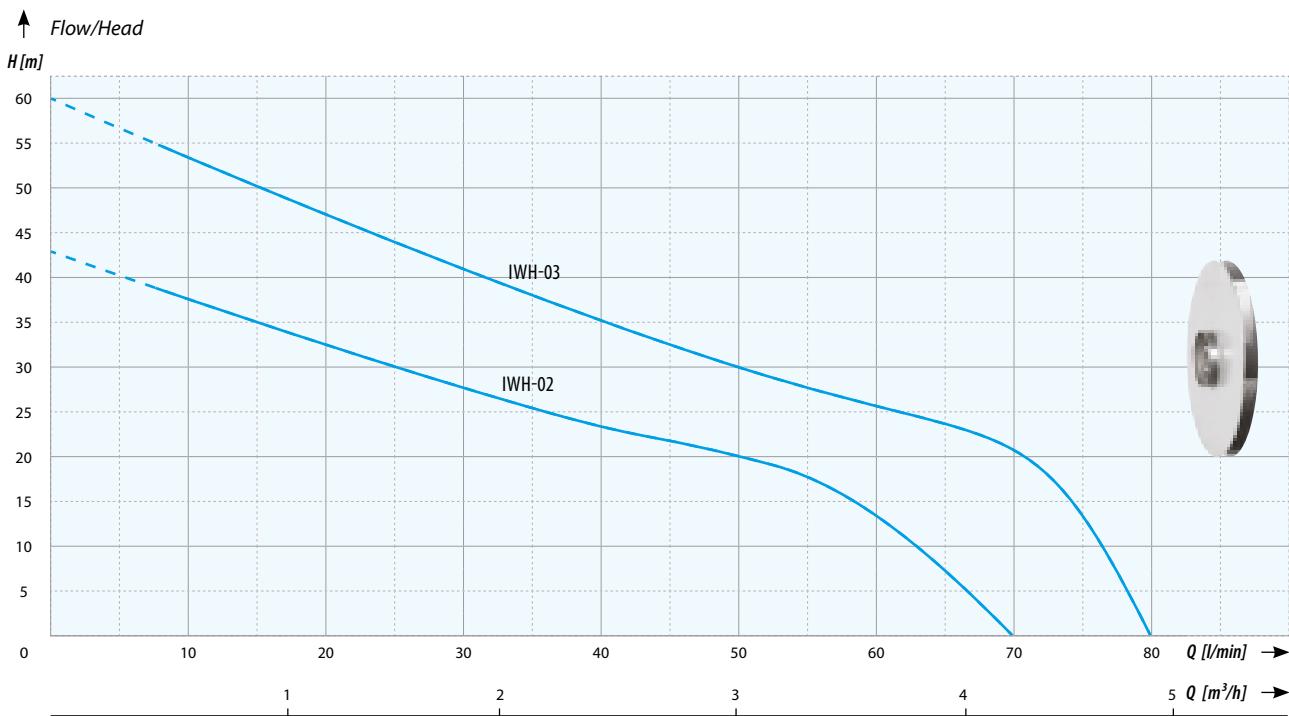

- Suction capacity from a depth of max. 9m
- Small dimensions of the pump
- The highest quality materials
- Possibility to work with a tank or hydrophore automats (e.g. PC, SK)
- Thermal protection built into the motor winding
- Warranty and post-warranty service

SPECIFICATIONS:

- Maximum liquid temperature: 70°C
- Maximum ambient temperature: 50°C
- Insulation class: F
- Mode of operation: continuous
- Ingress protection: IP55
- Motor speed: 2850 RPM
- Maximum pressure: 1.0 MPa

MATERIALS:

- Pump housing: AISI 304 stainless steel
- Impeller: AISI 316 stainless steel
- Inter-wall: AISI 304 stainless steel
- Diffuser / blade: noryl
- Mechanical seal: ceramic / graphite / NBR

NAME	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Suction lift (m)	Amperage (A)	Inlet/outlet [inch]	Dimensions L/H/W (cm)	Weight (kg)

IWH4-03	60	80	1000	230	9	6,2	1x1	42/22/20	11,8

JET PRO

A single-stage, self-priming, centrifugal surface pump characterized by the highest quality standards, equipped with a system increasing the suction capacity thanks to the use of a Venturi tube. The pump is designed to pumping clean, cold water from own intakes and for increase the pressure in installation. Single stage construction increase capability of suction, what is especially important during first start. The pumps are used for water supply to houses, recreational plots, farms, industry and irrigation.

CHARACTERISTICS:

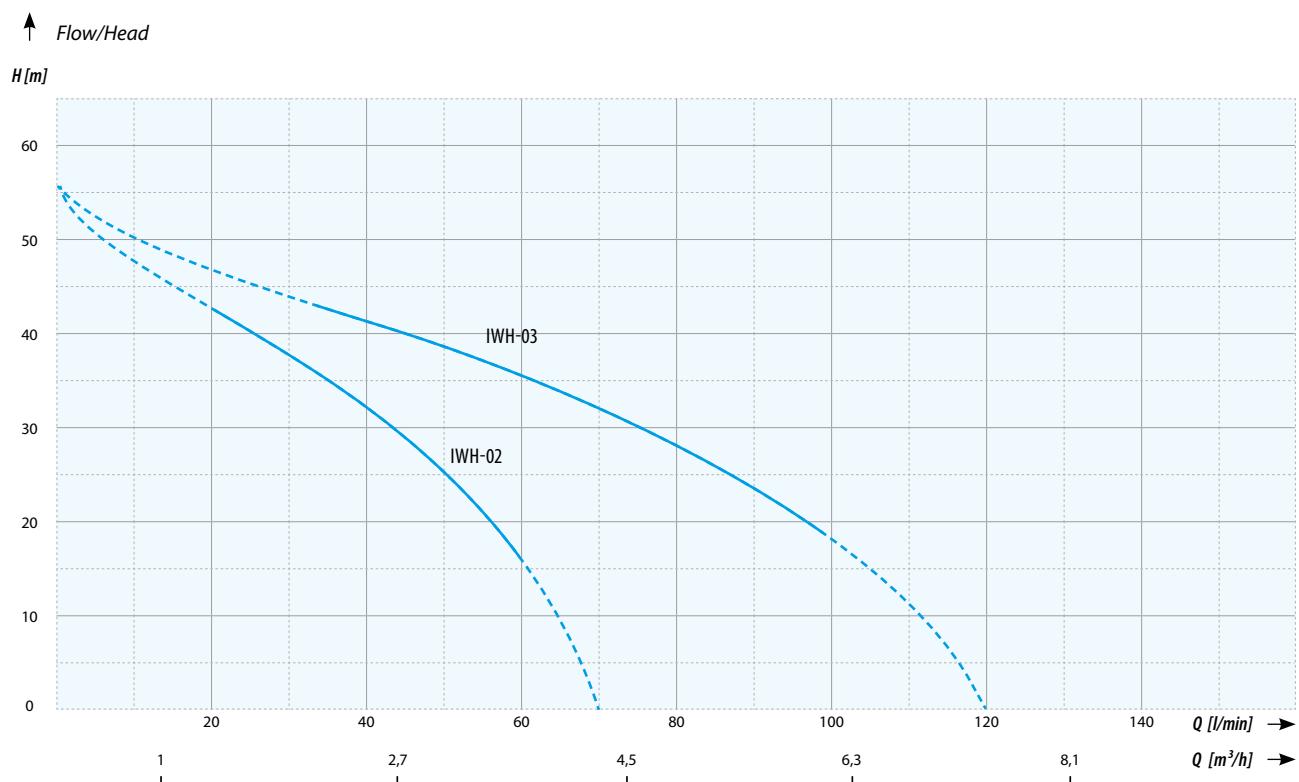

- Suction lift max. 9m
- Made of the highest quality materials
- Silence opre
- Possibility to work with a tank or hydrophore automats (e.g. PC, SK)
- Thermal protection built into the motor winding
- 36-month warranty
- Warranty and post-warranty service

TECHNICAL DATA:

- Maximum liquid temperature: 60°C
- Maximum ambient temperature: 40°C
- Power supply: 230V
- Insulation class: F.
- Operating mode: continuous
- Ingress protection: IP44
- Motor rotation speed: 2850 RPM
- Maximum pressure: 1.0MPa

MATERIALS:

- Pump housing: cast iron
- Shaft: AISI 304 stainless steel
- Impeller: AISI 304 stainless steel
- Diffuser: noryl
- Pump end plate: AISI 304 stainless steel
- Mechanical seal: ceramic / graphite / NBR

NAME	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Suction lift (m)	Amperage (A)	Inlet/outlet [inch]	Dimensions L/H/W (cm)	Weight (kg)

JET 1500 PRO	55	120	1500	230	9	9,3	1½ x 1½	45/22/19	24,5

S-MCI

A multistage, self-priming, centrifugal surface pump characterized by the highest quality standards, equipped with a system increasing the suction capacity thanks to the use of a Venturi tube. The pump is designed to pump clean, cold water from own intakes and for increase the pressure in installation. The multi-stage design of the pump allowed to reduce the noise level so that the pump can be installed at home. The pumps are used for water supply to houses, recreational plots, farms, industry and irrigation.

CHARACTERISTICS:

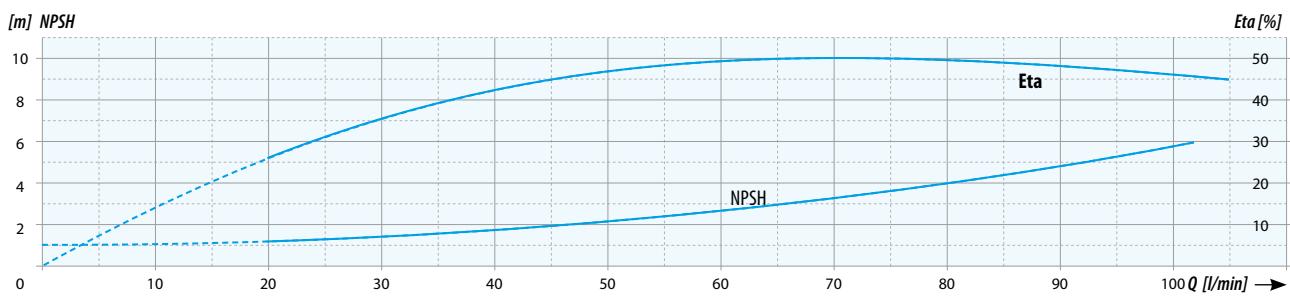

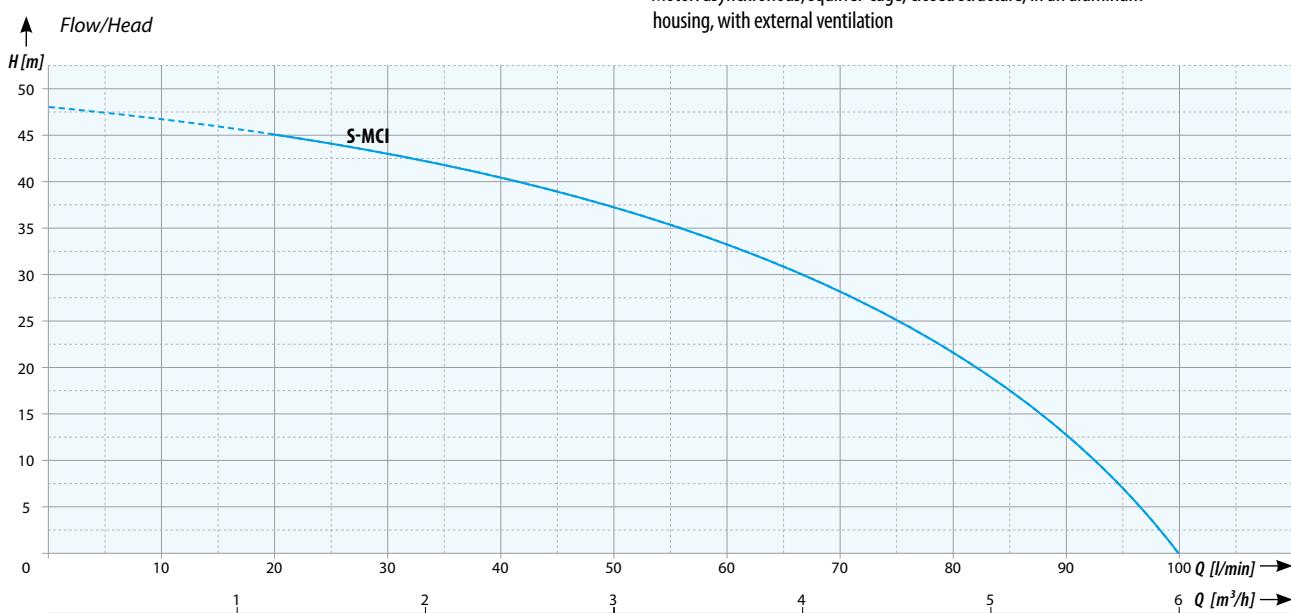

- Suction lift max. 8m
- High capacity and high pressure
- Made of the highest quality materials
- Silence operation
- Possibility to work with a tank or hydrophe controllers and inverters
- Thermal protection built into the motor winding
- 36-month warranty
- Warranty and post-warranty service

TECHNICAL DATA:

- Maximum liquid temperature: 70°C
- Maximum ambient temperature: 40°C
- Power supply: 230V
- Insulation class: F
- Operating mode: continuous
- Ingress protection: IP55
- Motor rotation speed: 2850 RPM
- Maximum pressure: 1.0MPa

MATERIALS:

- Pump housing: AISI 304 stainless steel
- Shaft: AISI 304 stainless steel
- Impellers and diffusers: AISI 304 stainless steel
- Suction diffuser: noryl
- Pump end plate: AISI 304 stainless steel
- Mechanical seal: SiC / SiC / EPDM
- Motor: asynchronous, squirrel-cage, closed structure, in an aluminum housing, with external ventilation

NAME	Head (m)	Flow (l/min)	Motor power (W)	Voltage (V)	Suction lift (m)	Amperage (A)	Inlet/outlet [inch]	Dimensions L/H/W (cm)	Weight (kg)

MH PRO

A series of multistage, self-priming, centrifugal surface pumps characterized by the highest quality of used materials and the ratio between price, parameters and quality. MH PRO are equipped with a system increasing the suction capacity thanks to the use of a Venturi tube. They are designed for pumping clean, cold water from own intakes and for increasing pressure. The pumps are used both in households (water supply, irrigation, rainwater) and in industry (car washes, air-conditioning systems, refrigeration).

CHARACTERISTICS:

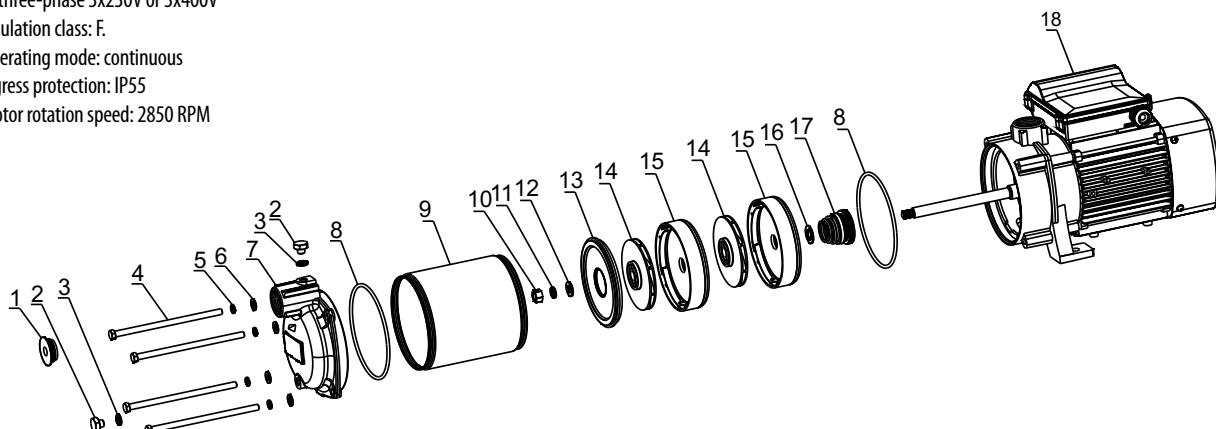

- Suction lift: 9m
- High flow and high pressure
- Made of the highest quality materials
- Silence operation
- Possibility to work with a tank or hydrophore controllers and inverters
- Thermal protection built into the motor winding
- 36-month warranty
- Warranty and post-warranty service

MATERIALS:

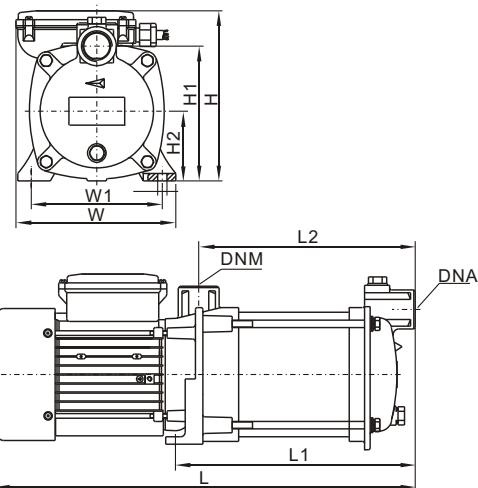

- Pump body: AISI 304 stainless steel.
- Shaft: AISI 304 stainless steel.
- Mechanical stuffing box: SIC / SIC / EPDM
- Connections: cast iron
- Rotor: noryl
- Diffuser: noryl
- Base: cast iron
- Motor: asynchronous squirrel-cage motor, closed design, in an aluminum housing, with internal ventilation.

TECHNICAL DATA:

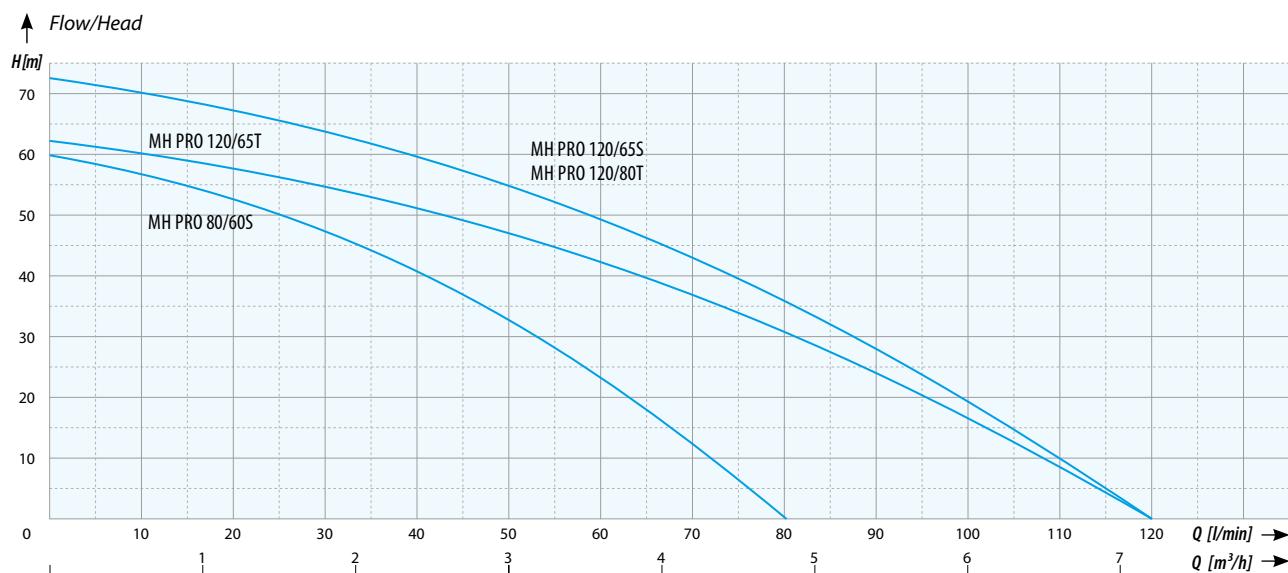

- Maximum liquid temperature: 70°C
- Maximum ambient temperature: 50°C
- Power supply: single-phase 1x 230V or three-phase 3x230V or 3x400V
- Insulation class: F.
- Operating mode: continuous
- Ingress protection: IP55
- Motor rotation speed: 2850 RPM

VMH
CV, CVI INOX*

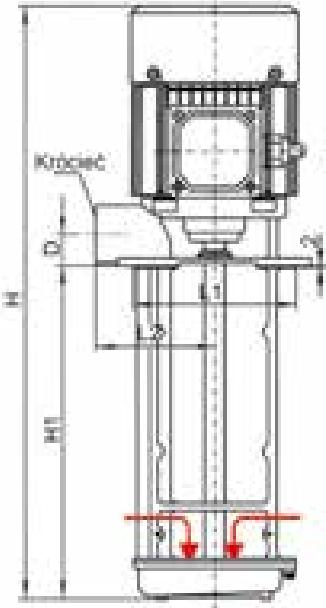

COLP

Submersible pumps for pumping coolants. Extended shaft design makes the pumps suitable for pumping liquids, coolants and oils that could have a negative impact on motor sealing in conventional pumps. The pump impeller and shaft are made of stainless steel.

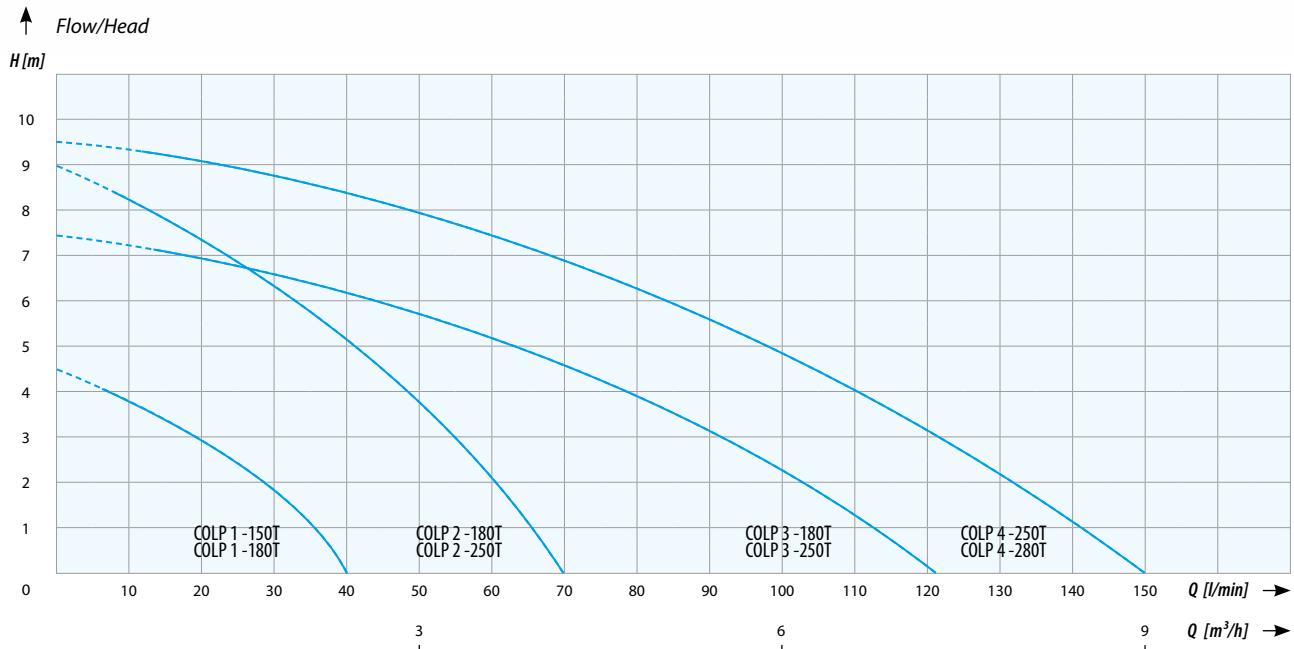

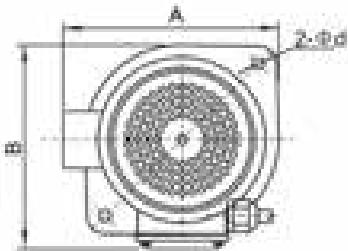

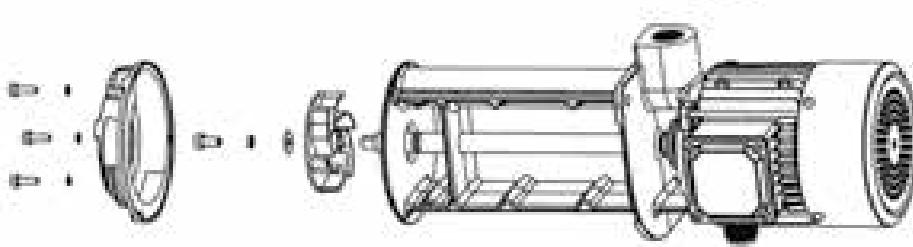

The top quality materials used make the pumps suitable for mediums with temperatures of 0 to 90°C and a maximum viscosity of 150mm² s⁻¹, at the maximum ambient temperature of 50°C. The maximum operating pressure of the pump is 0.3 MPa. The maximum diameter of impurities is 0.5 mm.

APPLICATIONS:

Pumping coolants, cutting fluids, oils in machine tools and all machines that require circulation of coolant

PMC INOX

CENTRIFUGAL, SINGLE-STAGE OPEN IMPELLER PUMPS

The pumps are designed for pumping contaminated liquids and substances containing solids with a diameter not exceeding 18 mm. The pumps are used in industry and agriculture.

The pumps can work in a horizontal and vertical position.

APPLICATION:

- Food industry: in washing and washing machines, for the transport of food liquids, transport of slurry in processing, transport of vegetable food, fish farms,
- Metallurgical industry: material treatment, process water systems
- Textile industry: they are used in dye houses, industrial laundries
- Manufacturing industry: cleaning bottles, cans, glass, transfer of painting fluids, dosing and mixing, complex machines
- Agriculture: pumps can be used for the transfer of moderately viscous liquids with low aggressiveness can be used for pumping fertilizers. They are also used in irrigation and drainage.
- Public utility units: air-conditioning systems, purification systems, heating systems, cooling systems, swimming pools, water treatment systems,
- Washing and cleaning: nano, micro and ultrafiltration systems, softening, ionizing, demineralizing systems, desalination systems, distillation systems, separators
- Chemical and pharmaceutical industries

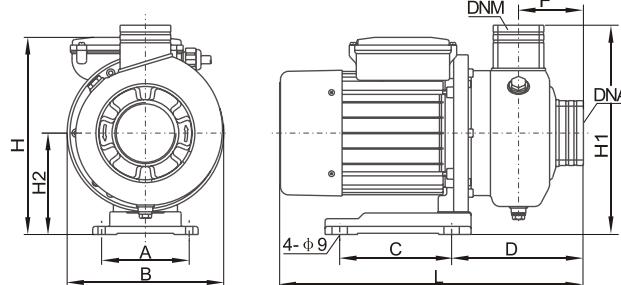

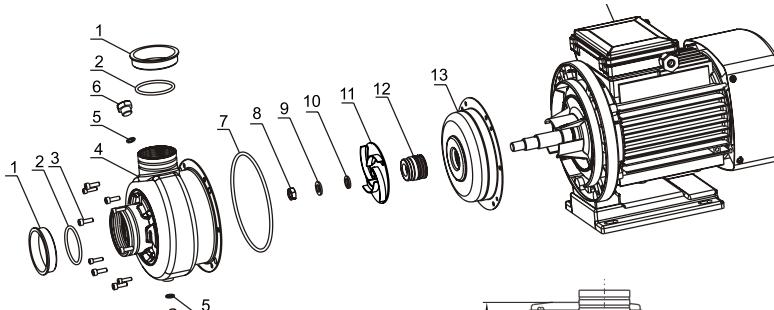

TECHNICAL DATA:

- Liquid temperature: 5-104°C
- Ambient temperature: up to 50°C
- Maximum system pressure: up to 10 bar
- Operating mode: continuous
- Ingress protection: IP55
- Winding insulation class: 155 (F)
- Motor rotation speed: 2850 RPM

MATERIALS:

- Motor: closed-frame asynchronous squirrel-cage motor, aluminum housing, external ventilation.
- Shaft: AISI 304 stainless steel
- Housing: AISI 304 stainless steel
- Open Impeller: AISI 304 stainless steel
- Pump end plate: AISI 304 stainless steel
- Mechanical seal: graphite / silicon carbide / NBR

F-CPM

F-CPM INOX CENTRIFUGAL SINGLE STAGE PUMPS WITH CLOSED IMPELLER

Pumps are designed for pumping slightly contaminated liquids and substances containing solids with maximum particle diameter of 1 mm. The pump can work with water, with a maximum content of non-absorbent, free solids up to 0.26 kg / m³ and a maximum dissolved solids content of up to 51 kg / m³, provided that the total content of gaseous substances in the water does not exceed the saturation volume.

APPLICATION:

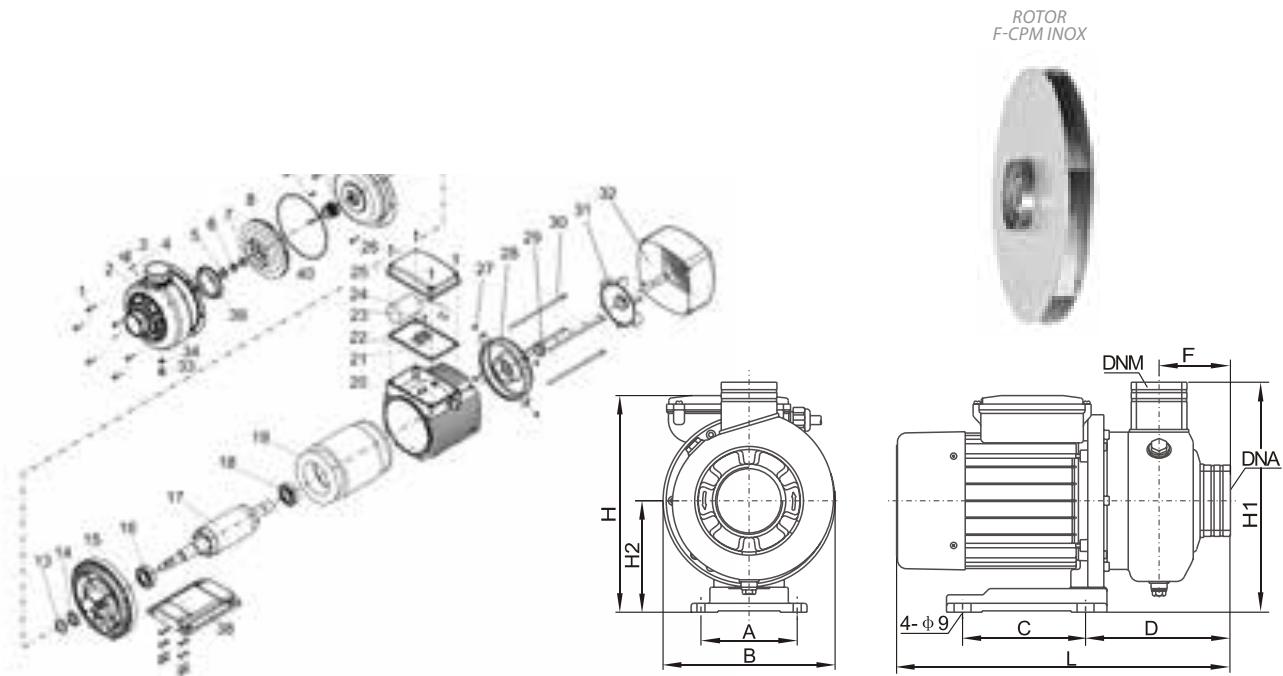

- Food industry: in washing and washing machines, for the transport of food liquids, transport of water in processing, fish farms, wineries
- Metallurgical industry
- Textile industry: they are used in dye works
- Manufacturing industry: cleaning of bottles, cans, glass
- Agriculture: pumps can be used for conveying moderately viscous slightly corrosive liquids, they can be used for pumping fertilizers. Pumps are also used for irrigation and drainage.
- Pool systems
- Heating industry: in air conditioning and heating systems
- Public utility units: air-conditioning systems, purification systems, heating systems, pressure boosting, swimming pools

TECHNICAL DATA:

- Liquid temperature: 5-90°C
- Ambient temperature: up to 50°C
- Maximum system pressure: up to 10 bar
- Operating mode: continuous
- Ingress protection: IP55
- Winding insulation class: 155 (F)

CENTRIFUGAL TWO-STAGE CLOSED IMPELLER PUMPS

The pumps are designed for pumping slightly contaminated liquids and substances containing solids with maximum particle diameter of 1 mm. Pumps can work with a water containing maximum level of non-absorbent free solids content of up to 0.26 kg / m³ and a maximum dissolved solids content of up to 51 kg / m³, provided that the total content of gaseous substances in the water does not exceed the degree of saturation. The double mechanical seal and the double impeller, characterized by high efficiency, make the pumps widely used in industry and agriculture, as well as in horticulture.

APPLICATION:

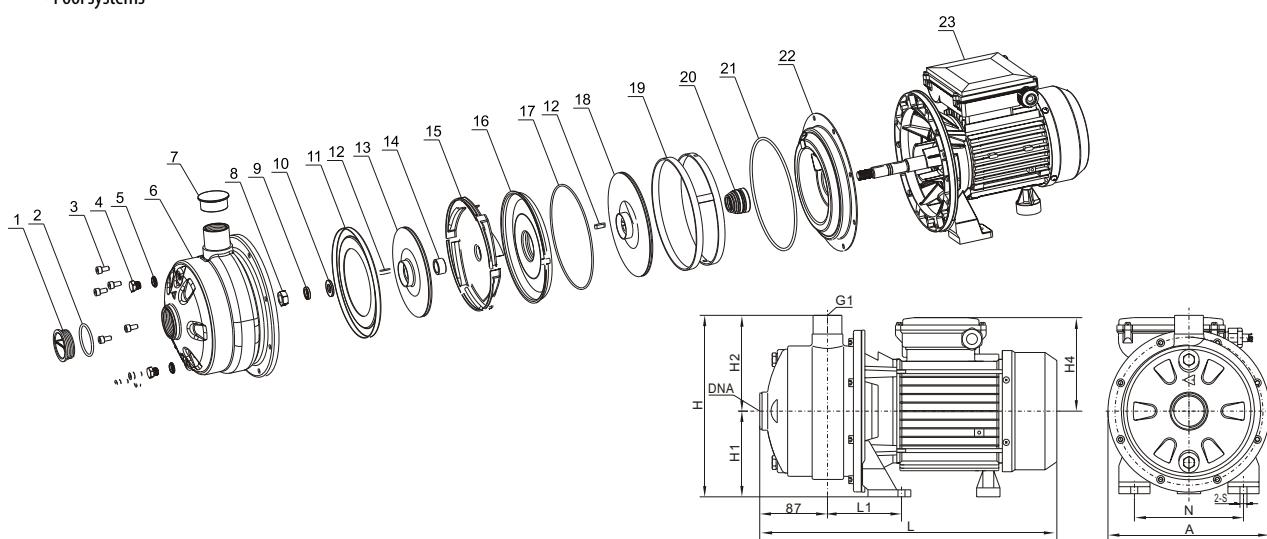

- Food industry: in washing and washing machines, for the transport of food liquids, transport of water in processing, fish farms,
- Metallurgical industry
- Textile industry: they are used in dye works.
- Manufacturing industry: cleaning of bottles, cans, glass
- Heating industry: in air conditioning and heating systems
- Agriculture: the pumps can be used for the transfer of moderately viscous liquids with low aggressiveness. They can be used for pumping fertilizers. They are also used in irrigation and drainage.
- Pool systems

TECHNICAL DATA:

- Liquid temperature: 0–70°C
- Ambient temperature: up to 50°C
- Maximum system pressure: up to 10 bar
- Operating mode: continuous
- Ingress protection: IP55
- Winding insulation class: 155 (F)
- Motor rotation speed: 2850 RPM

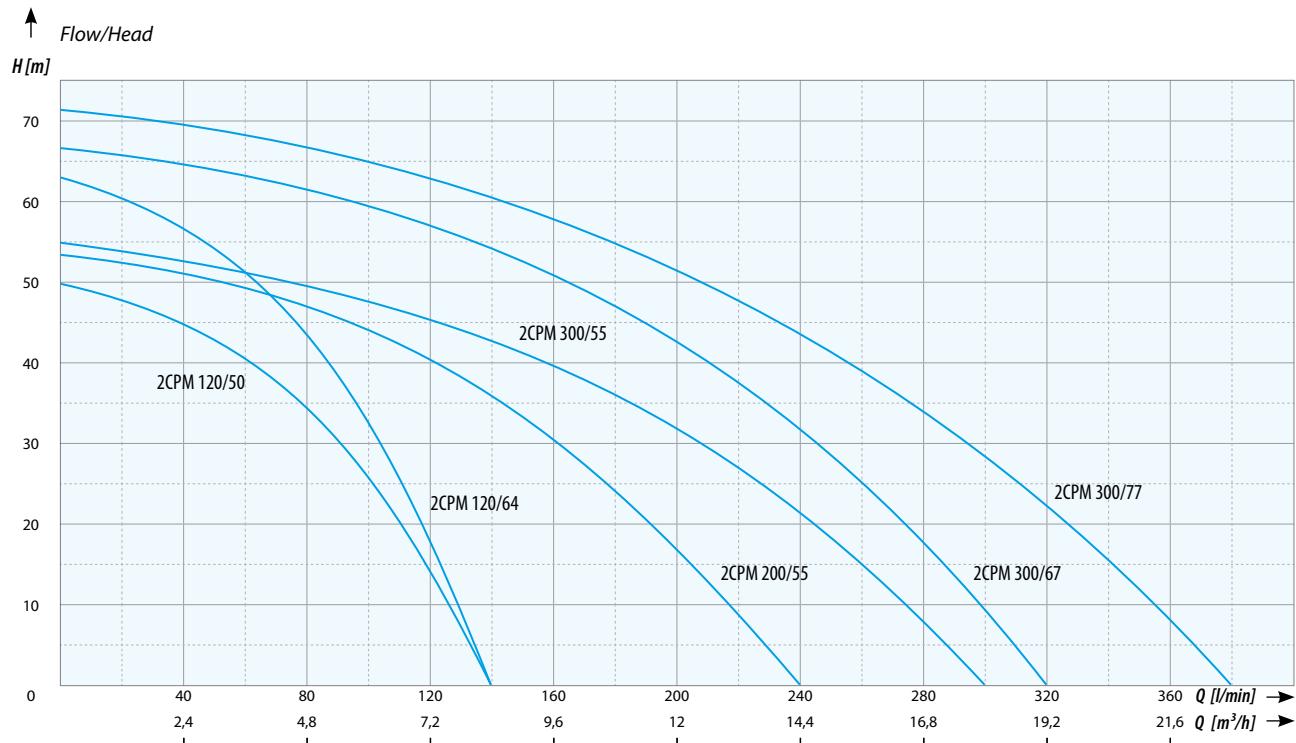

MATERIALS:

- Motor: asynchronous, squirrel-cage, closed structure, in an aluminum housing, with external ventilation.
- Shaft: AISI 304 stainless steel
- Housing: AISI 304 stainless steel
- Impeller: AISI 304 stainless steel
- Pump end plate: AISI 304 stainless steel
- Mechanical seal: graphite / silicon carbide / NBR.

MCI

MCI - a group of the top quality multi-stage non-self-priming centrifugal pumps. MCI pumps are powerful and robust units designed for a wide range of applications, from small home installations to continuous operation in large industrial systems. Hydraulic components are entirely made of AISI 304 (DIN 1.4301) stainless steel and reinforced mechanical seal allows to use liquids with temperatures of up to 70 degrees. MCI pumps provide flow of 3 m³ to 30 m³ per hour, and as a result they can be used in a wide range of applications.

MAIN ADVANTAGES OF MCI SERIES PUMPS:

- High reliability
- Wide range of flow
- Low noise level
- High hydraulic efficiency
- Thermal protection for single-phase motor

APPLICATION:

Households:

- supply of water
- irrigation (including cooperation with sprinklers)
- increasing pressure
- utilizing rainwater

Industrial applications:

- Jet washers
- Air conditioning systems
- Cooling systems: refrigerant pumping
- Heating systems: hot water and glycol pumping
- Maintaining pressure in livestock buildings
- Systems increasing humidity and temperature
- Increasing pressure in building utility systems
- Pumping of moderately viscous slightly corrosive liquids
- Food industry: in washers and cleaning machines, for conveying food liquids

Agriculture:

- Agriculture:
- pumping and dosing fertilizers (not corrosive to AISI 304 steel)
- Maintaining pressure in livestock buildings

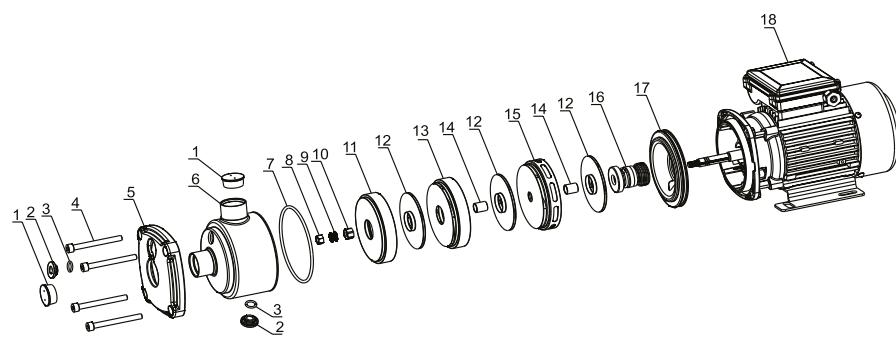

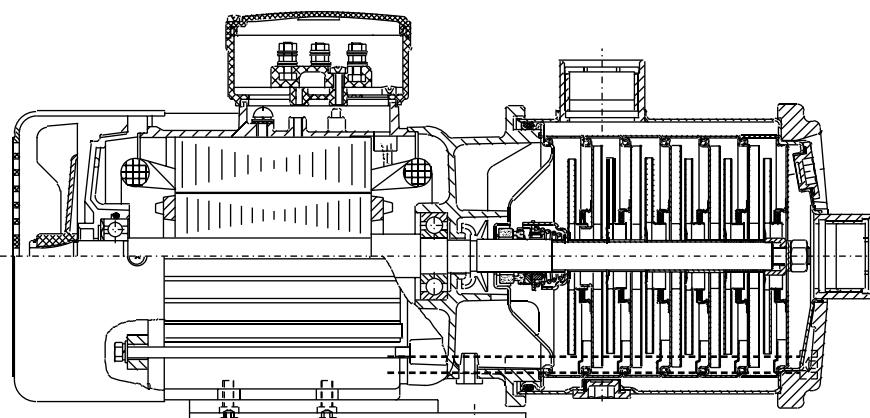

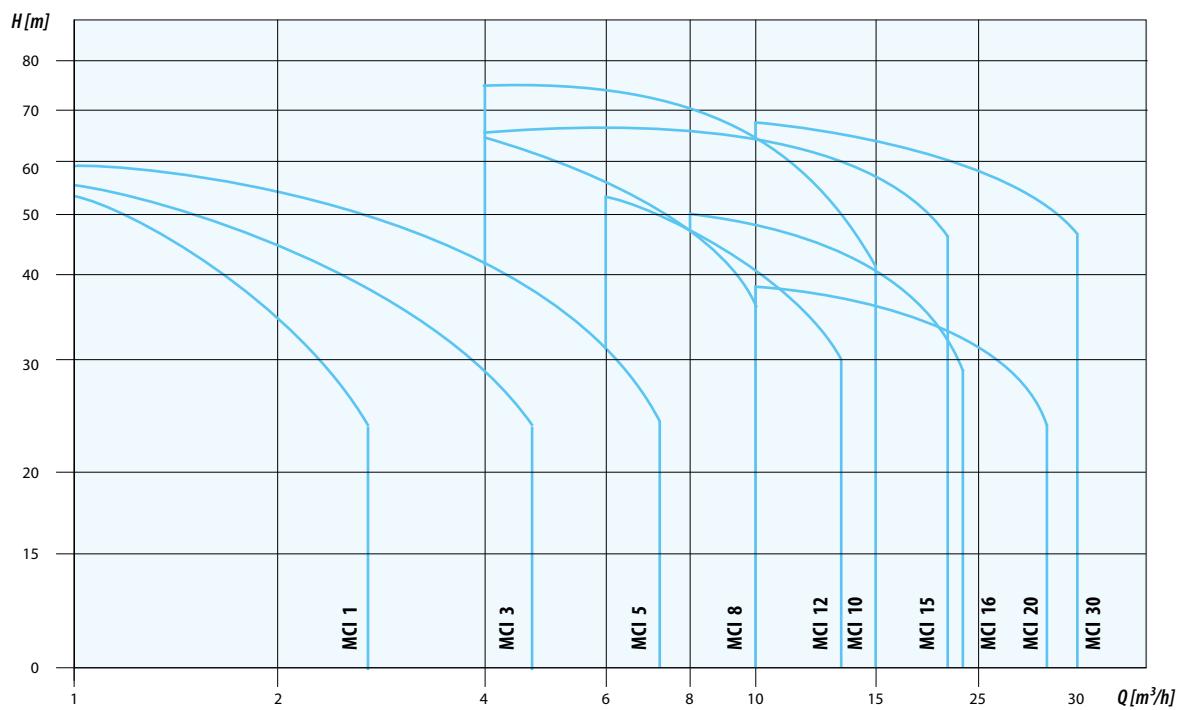

TECHNICAL DATA:

- Liquid temperature: ≤70°C
- Ambient temperature: ≤50°C
- Maximum pressure in the system: up to 8 bar
- Ingress protection: IP55
- Insulation class: F

MATERIALS:

- Body - Stainless steel AISI 304.
- Shaft - Stainless steel AISI 304.
- Mechanical seal – SIC/SIC/EPDM
- Inlet/outlet: Stainless steel AISI 304
- Impellers, Venturi tubes, Venturi tube coverplates
- Stainless steel AISI 304.
- Pump end plate: Stainless steel AISI 304
- Base plate: Steel
- Motor: asynchronous enclosed squirrel-cage with aluminium housing and external cooling

VMH

The pumps are designed to work in pressure boosting systems in civil engineering, industrial applications and agriculture. They are designed for pumping clean water or other non-corrosive, non-flammable and non-explosive liquids of consistency similar to water. Due to compact design, the pump to be installed in various machines that require high pressure water supply. High temperature resistant and reinforced hydraulic components, mechanical seal and thrust bearing allow to pump liquids with temperatures of up to 70°C, as well as to operate in high pressure systems.

APPLICATION:

Industrial applications:

- Air conditioning systems
- Cooling systems
- Heating systems
- Industrial washing facilities
- Fire extinguishing system
- Water treatment (purification)
- Increasing pressure in building utility systems
- Fish-keeping

Households:

- Supply of water
- Irrigation (including cooperation with sprinklers)

Agriculture:

- Irrigation
- Maintaining pressure in livestock buildings

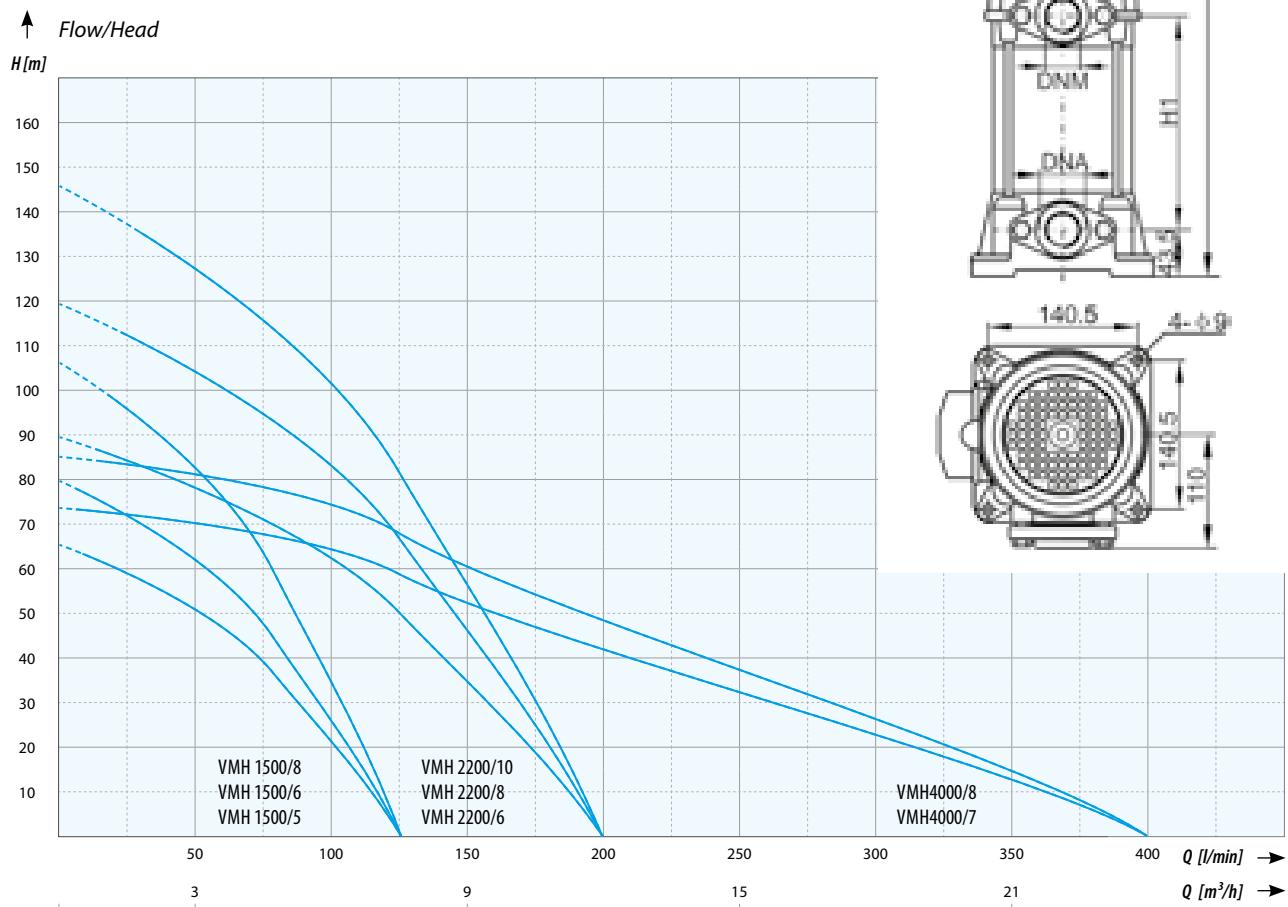

SPECIFICATIONS:

- Liquid temperature: 0-70°C
- Ambient temperature: up to 50°C
- Maximum pressure in the system: up to 1.5 MPa
- Ingress protection: IP55
- Winding insulation class: 155 (F)

MATERIALS:

- Motor: asynchronous enclosed squirrel-cage with aluminium housing and external cooling. Motors of 3-phase pumps can operate in star (3x400V) or delta (3x230V) connection. Single-phase motors are equipped with a thermal protection mounted in the motor winding.
- Shaft: Stainless steel AISI 304
- Housing: Stainless steel AISI 304
- Impeller: Noryl with increased fibre content in the polymer / Stainless steel AISI 304
- Inlet/outlet: Grey cast iron
- Mechanical seal: graphite/silicon carbide/NBR

CV, CVI INOX

VERTICAL, MULTI-STAGE, CENTRIFUGAL STAINLESS STEEL PUMPS
WITH IN LINE CONNECTIONS

CV

The CV and CVI INOX series, characterised by high efficiency, low noise level and reliable sealing, have been designed for a wide range of applications. For pumping of clean, chemically non-aggressive liquids. CVI INOX pumps, in the part which is in contact with water, are made entirely of stainless steel. Both pump versions are available with IE-3 energy efficient motors.

APPLICATION:

1. Potable and utility water supply systems, including:

- waterworks
- hydrophore plants
- hydrophore plants and systems
- pressure boosting in building installations
- water treatment plants

2. Industry, including:

- industrial treatment systems: washing/rinsing systems,
- high pressure circulation systems,
- boiler room supply
- AC systems
- cooling systems
- fire systems
- machine lubrication systems
- water supply in high-rise buildings
- oil, glycol and coolant transfer
- golf courses

3. Agriculture, including:

- watering systems
- rainwater units
- irrigation systems
- fish farms
- pressure maintenance in livestock buildings

4. Services, including:

- laundries
- car wash

TECHNICAL DATA:

- Flow range: 0,7-120 m³/h
- Maximum pressure: 32 bar
- Temperature of liquids: -20°C / +104°C
- Ambient temperature: +40°C
- pH value range: pH 3~9

MATERIALS:

- Three-phase, two-pole, asynchronous motor with a squirrel-cage rotor
- Insulation class: F
- Protection rating: IP55
- Impellers: stainless steel AISI304 (EN/DIN 1.4301)
- Diffusers: stainless steel AISI304 (EN/DIN 1.4301)
- Pump shaft: stainless steel - for CV pumps AISI420, for CVI INOX pumps AISI431 (EN/DIN 1.4057)
- Pump housing - stainless steel AISI304 (EN/DIN 1.4301)
- Suction/discharge body of the pump - for CV pumps: cast iron ASTM25B (EN/DIN EN-JL1030), for CVF pumps: cast AISI304 (EN/DIN 1.4301), for CVL pumps, pressed sheet AISI304 (EN/DIN 1.4301)
- Package mechanical gland for basic versions from + 10°C to + 90°C: silicon carbide/tungsten carbide/EPDM

FREQUENCY OF STARTUPS AND STOPS:

- Motor with a power of up to 4kW incl.: Maximum 100 times per hour.
- 5.5kW engines and higher: Maximum 20 times per hour

RQE AUTO RAIN

SUBMERSIBLE HIGH PRESSURE PUMPS

RQE AUTO RAIN is a series of the high pressure submersible pumps designed for irrigation systems. Pumps are equipped with a built-in automatic pump control. Opening the valve or tap turns on the pump and when the valve or outlet tap is closed, the pump goes into standby mode and turns off, keeping the pressure in the system constant. RQE pumps use a cooling jacket, which means that the pumps do not have to be completely submerged. Instead of a filter mesh, the RQE around the pump is equipped a 1-inch suction port dedicated for connecting suction hose with a check valve. The advantage of this solution is protection against sedimentation - the pump does not suck the water from the bottom of the tank which usually can be contaminated with sediments. The RQE pump is also equipped with thermal protection in the motor winding.

The RQE AUTO RAIN pump has an anti-blocking system. If the pump is not used for more than a 24 hours, the pump will be automatically started for 2 minutes every 24 hours, eliminating the risk of blocking the pump by sediment.

APPLICATION:

Installation in rainwater tanks to supply rainwater to gardens. Water supply for houses from wells and garden watering installations. The pumps can be used in ponds and for obtaining water from sources like lake or river.

TECHNICAL DATA:

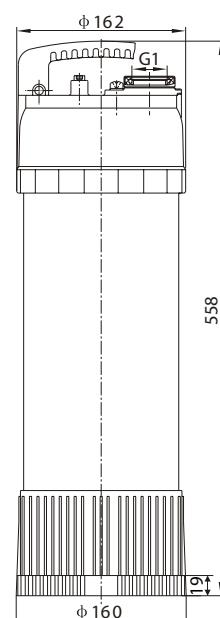

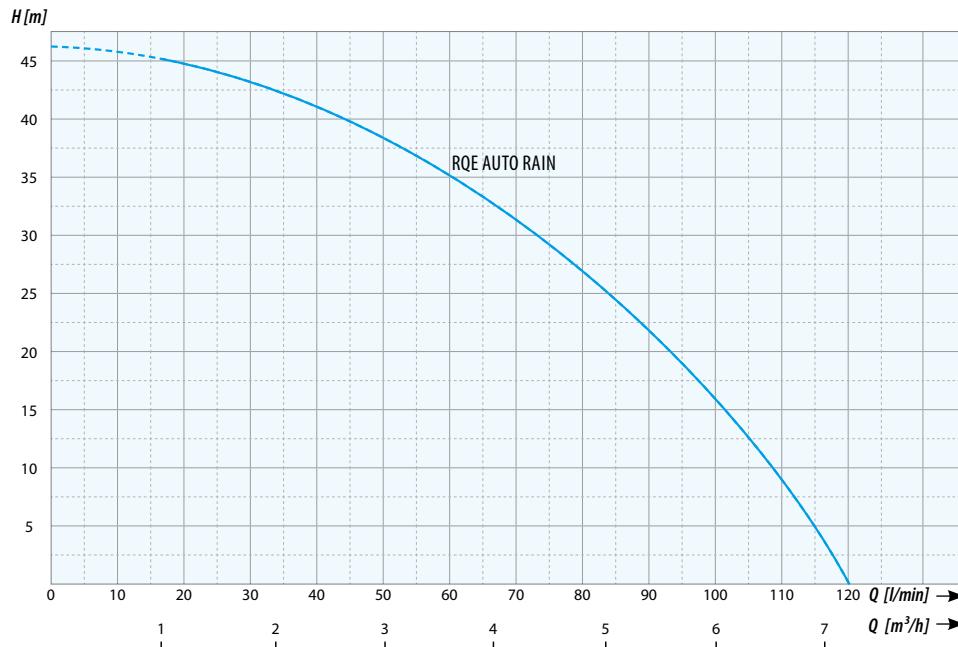

- Maximum liquid temperature 40 °C
- Maximum ambient temperature 50 °C
- Thermal protection: yes
- Operating mode: continuous
- Protection: IP68
- Winding insulation class: 155 (F)
- Motor rotation speed: 2850 RPM

MATERIALS:

- Motor housing: AISI 304 stainless steel
- Shaft and rotor: AISI 304 stainless steel
- Impeller: noryl
- Mechanical seal: ceramic / carbon / NBR
- Motor speed: 2860 RPM
- Electric cable: 10m H07-RNF

RQE AUTO

SUBMERSIBLE HIGH PRESSURE PUMPS

RQE AUTO is a series of the high pressure submersible pumps designed for irrigation systems which are equipped with a built-in automatic pump control. Opening the valve or tap turns on the pump and when the valve or outlet tap is closed, the pump goes into standby mode and turns off, keeping the pressure in the system constant. RQE pumps use a cooling jacket, which means that the pumps do not have to be completely submerged. The base of the pump is finished with a filtering screen that allows water to be pumped out to the level of 5 cm. All pumps have thermal protection installed in the motor winding. The flow sensor protects the pump: if the sensor detects no water in the tank, the pump will be automatically turned off.

The RQE AUTO pump has an anti-blocking system. If the pump is not used for more than a 24 hours, the pump will be automatically started for 2 minutes every 24 hours, eliminating the risk of blocking the pump by sediment.

APPLICATION:

Installation in rainwater tanks to supply the gardens with rainwater. Supply of houses with water from whirlpool wells and irrigation systems for gardens. The pumps can be used in water pockets and to extract water from springs whose water level is at the surface.

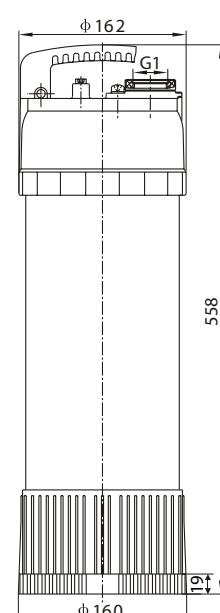

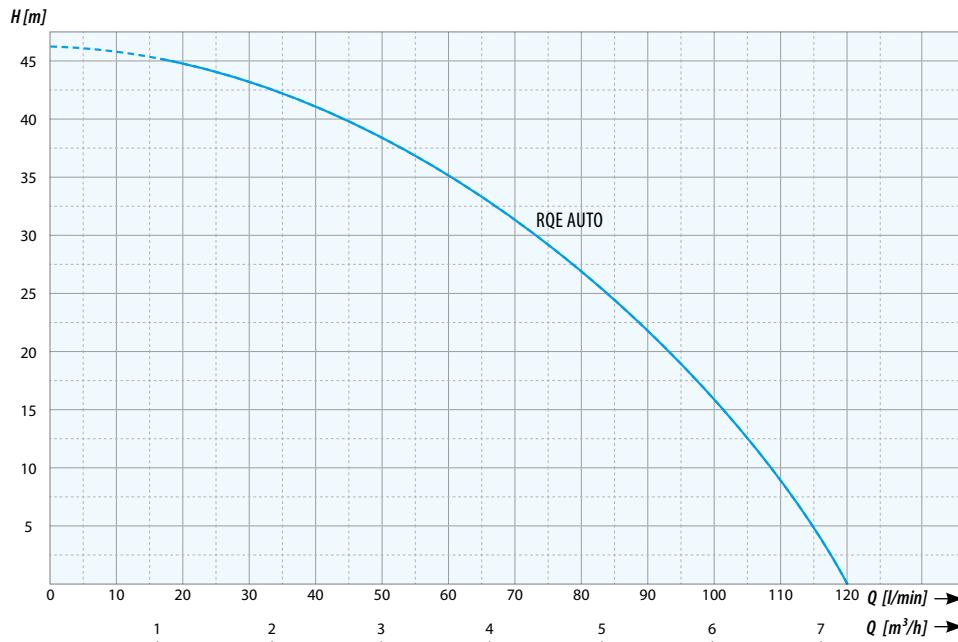

TECHNICAL DATA:

- Maximum liquid temperature 40 °C
- Maximum ambient temperature 50 °C
- Thermal protection: yes
- Operating mode: continuous
- Protection: IP68
- Winding insulation class: 155 (F)
- Motor rotation speed: 2850 RPM

MATERIALS:

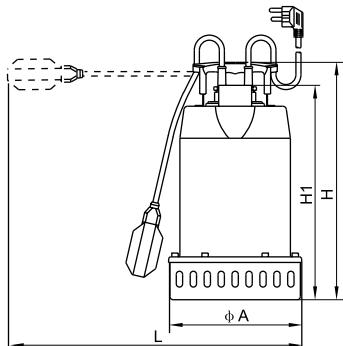

- Motor housing: AISI 304 stainless steel
- Shaft and rotor: AISI 304 stainless steel
- Impeller: noryl
- Mechanical seal: ceramic / carbon / NBR
- Motor speed: 2860 RPM
- Electric cable: 10m H07-RNF

Stainless steel submersible pumps for pumping clean and slightly contaminated water. Due to the highest-quality standards and made of stainless steel, the pumps ensure many years of maintenance-free operation. The motor is equipped with thermal protection installed in the winding. The pumps are designed with a cooling jacket, which means that they do not have to be completely submerged in water. The pumps are entirely made of stainless steel and the double mechanical seal guarantees reliability.

APPLICATION:

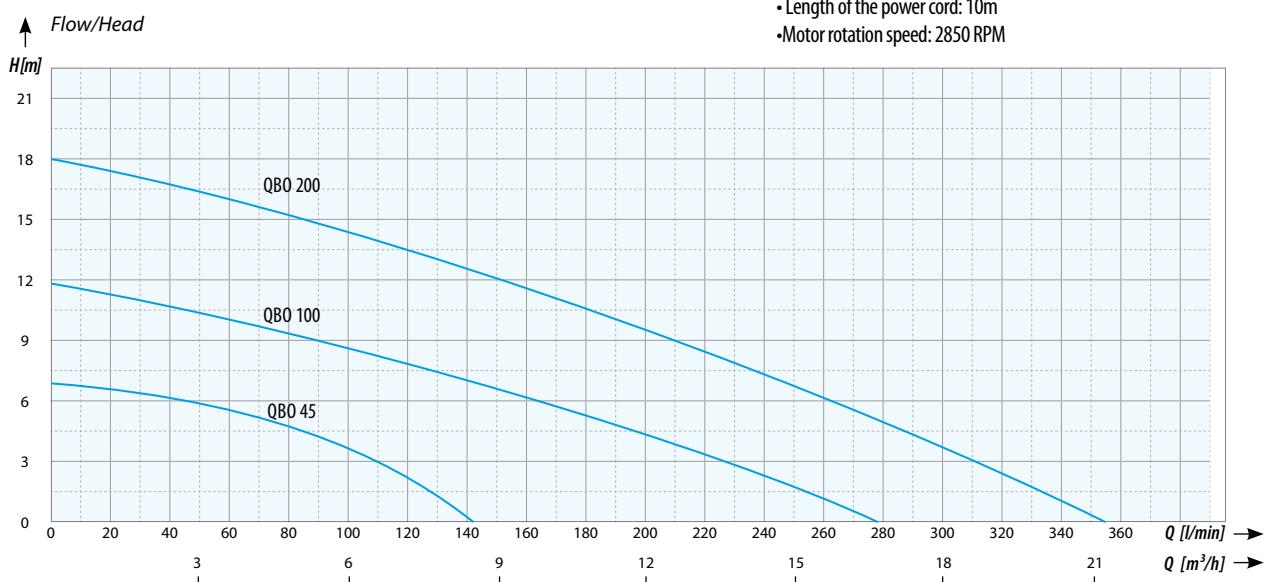

Pumping rainwater and surface water from ponds, lakes and rivers, supplying ponds. Drainage of flooded rooms, houses, garages and premises, use in fish farms. Thanks to the material, the pump can pump sea water.

WORKING CONDITIONS:

- Maximum liquid temperature 50 °C
- Maximum ambient temperature 40 °C
- Thermal protection: yes (one phase)
- Winding insulation class: 155 (F)
- Operation mode - continuous
- Ingress protection - IP68
- pH of the water: 4-10

MATERIALS:

- Motor housing: AISI 304 stainless steel
- Shaft and rotor: AISI 304 stainless steel
- Impeller: AISI 304 stainless steel (for QBO45 - noryl)
- Mechanical seal: ceramic / carbon / NBR
- Length of the power cord: 10m
- Motor rotation speed: 2850 RPM

SUBMERSIBLE PUMPS FOR SEWAGE WE

- ↗ The wide impeller channels allow unobstructed flow that is hard to block
- ↗ The unique combination of mechanical seals and bearings allows the use of a short shaft with high stiffness
- ↗ Pumps adapted to various installation versions
- ↗ Perfect combination of mechatronics, safety and reliability, and easy maintenance
- ↗ Two independent humidity sensors in the oil chamber and in the motor, and a thermal sensor in the stator winding
- ↗ Innovative sludge mixing system around the pump inlet for suction of even larger amounts of impurities
- ↗ S1 submerged motor for continuous operation, winding insulation class F, device protection IPX8

The presented WE sewage pumps with a motor power of up to 7.5kW combine the advantages of many other products. Years of experience in the use of hydraulic models, mechanical structures and various aspects of seals have allowed us to develop a comprehensive design that can boast high efficiency, energy saving properties and high reliability. Simpler structure, easier disassembly and maintenance, more economical and practical pump.

The WE type submersible pump is suitable for the following applications: raw water and waste water supply, irrigation systems, drainage of groundwater, fountains and drainage of trenches.

TECHNICAL DATA:

1. 400V 50Hz 3-phase power supply
2. Ambient temperature up to 40°C
3. pH range of 4-10
4. Density ≤1050kg/m³
5. Minimum level of the utility in the drawing as s
6. Permitted continuous operation S1 when fully submerged.
7. Maximum number of startups per hour: 15
8. Do not use in highly corrosive environments and for utilities containing corrosive or abrasive particles.

Use for clear, thin, non-aggressive liquids without solid particles or fibres longer than 80% of the pump passage diameter.

Product names

1	2	3		4	5	6	7
WE	65	25	-	4	2	L	Z*

Eg. WE6515-42L

Pump type: WE (two-channel closed), WES (inlet chopper) and ZWE (chopping impeller)

1. Connection diameter DN (40, 50, 65, 80, 100)
2. Approximate passage through the impeller (from 15 to 50)
3. Pump power e.g. 4 kW
5. Lifting range L-low, H-high, - no symbol means one model in the series
6. Installation version:
Z - With an attachment for the coupling foot,
Y - Portable with a rigid discharge pipeline,
R - Portable with a flexible discharge hose,
* - No symbol means the pump itself is prepared for a standard attachment

SUBMERSIBLE SEWAGE PUMPS WES INCL. GRINDER

- ↗ High-quality hardened steel knife for cutting impurities at the pump inlet
- ↗ Adjustable hardened steel cutting plate for precise positioning of the cutting blade.
- ↗ The unique combination of mechanical seals and bearings allows the use of a short shaft with high stiffness
- ↗ Pumps adapted to various installation versions
- ↗ Perfect combination of mechatronics, safety and reliability, and easy maintenance
- ↗ Two independent humidity sensors in the oil chamber and in the motor, and a thermal sensor in the stator winding
- ↗ S1 submerged motor for continuous operation, winding insulation class F, device protection IPX8

The presented WES sewage pumps with a motor power of up to 4kW combine the advantages of many other products. Years of experience in the use of hydraulic models, mechanical structures and various aspects of seals have allowed us to develop a comprehensive design that can boast high efficiency, energy saving properties and high reliability. Simpler structure, easier disassembly and maintenance, more economical and practical pump.

Light submersible sewage pump WES is mainly used in municipal engineering, construction, domestic and industrial sewage, sewage treatment plants and pumping rainwater.

WORKING CONDITIONS:

1. 400V 50Hz 3-phase power supply
2. Ambient temperature up to 40°C
3. pH range of 4-10
4. Density of the utility $\leq 1050 \text{ kg/m}^3$
5. Minimum level of the utility in the drawing as s
6. Permitted continuous operation S1 when fully submerged.
7. Maximum number of startups per hour 15
8. Do not use in highly corrosive environments and for utilities containing corrosive or abrasive particles.
9. Use for raw sewage and liquids containing solid or fibrous particles not longer than 80% of the diameter of the pump outlet.

SUBMERSIBLE SEWAGE PUMPS ZWE INCL. CUTTING IMPELLER

- ↗ High-quality hardened steel rotor for cutting impurities at the pump inlet.
- ↗ Unique cutting disc structure with grooves and scraper for the removal of particulate solids.
- ↗ High resistance of the grinding system to abrasion and corrosion in an aggressive environment.
- ↗ Pumps adapted to various installation versions.
- ↗ Perfect combination of mechatronics, safety and reliability, and easy maintenance.
- ↗ Two independent humidity sensors in the oil chamber and in the motor, and a thermal sensor in the stator winding.
- ↗ S1 submerged motor for continuous operation, winding insulation class F, device protection IPX8.

The presented ZWE sewage pumps with an engine power of up to 37kW combine the advantages of many other products. Years of experience in the use of hydraulic models, mechanical structures and various aspects of seals have allowed us to develop a comprehensive design that can boast high efficiency, energy saving properties and high reliability. Simpler structure, easier disassembly and maintenance, more economical and practical pump.

ZWE submersible sewage pump is suitable for the following applications:
raw water and dirty water supply, domestic sewage, irrigation and drainage systems of excavations.

WORKING CONDITIONS:

1. 400V 50Hz 3-phase power supply
2. Ambient temperature up to 40°C
3. pH range of 4-10
4. Density of the utility $\leq 1050\text{kg/m}^3$
5. Minimum level of the utility in the drawing as s
6. Permitted continuous operation S1 when fully submerged.
7. Maximum number of startups per hour 15
8. Do not use in highly corrosive environments and for utilities containing corrosive or abrasive particles.
Use for raw sewage and liquids containing solid or fibrous particles not longer than 80% of the diameter of the pump outlet.

Product names

1	2		3	4	5
ZWE	65	-	4	2	Z*

Eg. ZWE65-42

Pump type: WE (two-channel closed), WES (inlet chopper) and ZWE (chopping impeller)

1. Connection diameter DN (40, 50, 65, 80, 100)
2. Approximate passage through the impeller (from 15 to 50)
3. Pump power e.g. 4 kW
5. Lifting range L-low, H-high, - no symbol means one model in the series
6. Installation version:
Z - With an attachment for the coupling foot,
Y - Portable with a rigid discharge pipeline,
R - Portable with a flexible discharge hose,
* - No symbol means the pump itself is prepared for a standard attachment

DELIVERY/SUCTION SIDE MANIFOLDS

MH PRO SET - IVR-11

MULTI SET IVR

INVERTER SYSTEM – SMARTFLOW

IVR-10 S/T Smartflow Pump Controller first all-in-one & in-line inverter pump manager to upgrade and manage most of the water pumps. It provides constant water pressure, and saves energy for most kinds of water usage. The product is integrated with all the required functionalities of a conventional inverter booster pump. With this design, the assembly time & cost of an inverter booster pump are significantly reduced, which sets up a new industry standard.

Device is dedicated for: deep well pumps, surface pumps, submersible pumps, etc., maintaining a constant, set water pressure by changing the rotational speed of the pump motor.

The S

martFlow model provides many operating modes by adapting to various electrical systems. Its important feature that distinguishes it from popular on/off control devices is:

1. Energy efficiency. Compared to the traditional water supply method, the constant pressure water supply system with frequency converter saves up to 30%-60% of energy.

2. Simple operation: easy to use, all functions can be terminated by pressing a button, without the need to hire programming specialists.

3. Long-term reliability of the co-operating pumps: the average torque and shaft wear are reduced due to decreasing the average rotational speed, which increases the pump operational lifetime. Due to the built-in soft start and stop function, the device allows to eliminate the water hammer (the hydraulic stroke is a sudden pressure increase that occurs at rapid stopping or starting of liquid flow.)

4. Fully protected: the system incorporates the most versatile:

- overcurrent / overvoltage / undervoltage
- short-circuit
- impeller blocking
- dry-running protection technology without the need to install probes/sensors in the well
- excess temperature protection
- leakage warning
- over pressure protection
- anti-freezing protection

FEATURES:

Front panel: intuitiv interface for smarter setting, and indication for pressure & error status.

Flow switch: Precise flow switch to achieve stable operation even at 2L/min water usage.

Check valve: Durable non-return check valve to prevent back flowing and hydraulic stroke damage.

Pressure tank: Rechargeable 0.6L SS304 pressure tank to prevent pump short cycling and hydraulic stroke damage.

Union pipe connectors: Standard M1"(25mm), 1-1/4" (32mm), 1-1/2"(38mm), and a longer M1" (25mm) for taller junction box

Inverter & pump protector

Provide variable speed, constant water pressure, soft start & stop Convert 1ph to 3ph for energy saving All-around protection for water pump and piping.

Pressure sensor: High-quality pressure sensor for precise + longevity operation.

APPLICATION:

SmartFlow can be used in all applications where maintaining a constant water pressure in the system, as well as control and protection of a single pump that controls automatic switching on and off by various electrical systems is required.

TYPICAL APPLICATION:

- houses / apartments / holiday houses,
- agricultural holdings,
- supply of water from the well,
- irrigation of growing houses, gardens, agricultural land,
- collecting and using rainwater,
- industrial equipment.

INVERTER SYSTEM – SMARTFLOW

INSTALLATION DATA	
Permissible ambient temperature	-10°C – +50°C
Permissible ambient humidity	20% – 90% RH
Permissible liquid temperature	0°C – +50°C
Ingress Protection	IP55
Mounting orientation	Pion
Unit dimensions (L/W/H)	230 x 170 x 230 mm
Inlet/outlet	G 1 ¼" / G 1 ¼" or G 1½" / G 1½"
Capacity of pressure tank	0,6L
Max installation pressure	10 bar
Max Flow	300L/min
MAIN TECHNICAL DATA	
Rated output power	0,37 kW – 1,5 kW (0,5 HP – 2 HP)
Rated input voltage	AC200-240V/50-60HZ (single-phase)
Pump max. amp rating	8A
Rated output voltage	3x 230V / 30-60 Hz (single-phase)
Additional pump rated output voltage	1x 230V / 50 Hz (three-phase)
Response time under overload condition	5 s – 5 min.
Pressure setting range	1 – 6 bar
MAIN TECHNICAL DATA	
Protection	double flow control pressure control
Permissible ambient temperature	Manual / Automatic
Permissible ambient humidity	probe electrode pulse and flow switch
Permissible liquid temperature	Pressure sensor 24 V, 4–20 mA

IVR-11

The intelligent pump controller, IVR-11 model, is an easy-to-use control and safety device for direct connection of three-phase deep-well pumps, surface pumps, submersible pumps, etc. from 0.75 kW to 7.5 kW (1 HP to 10 HP) keeping constant, set water pressure by changing the rotational speed of the pump motor. The IVR-11 is a frequency converter drive, specifically designed to manage water pump performance which fits a wide range of water supply requirements and conditions.

The IVR-11 drive allows the pump to operate in a more efficient, safer, and smarter manner, reduce energy consumption, and extend the life of the pump. The IVR-11 drive is made of high-quality components and materials, and uses the latest microprocessor technology.

The IVR-11 model has many operating modes by adapting to various electrical installations. IVR-11 series controllers may be used in pump groups up to 5 pumps — maximum 1 master device and 4 auxiliary devices.

THE MOST IMPORTANT FEATURES WHICH DISTINGUISH IT FROM POPULAR ON/OFF CONTROL DEVICES ARE:

1. Increasing energy efficiency: compared with the traditional water supply method, the constant pressure water supply system with frequency converter saves energy by 30–60%.

2. Simple operation: easy operation, all functions can be completed by pressing a button, no need to hire specialists for programming.

3. Long-term reliability of associated pumps: average torque and shaft wear are reduced due to the drop in average speed, which ensures a longer pump life. Due to the built-in soft start and stop function, the device allows you to eliminate the hydraulic shock. (this phenomenon, sometimes called „water hammer”, is a sudden increase in pressure accompanying a quick stop or start of fluid flow.)

4. Comprehensive protection: the system has the most comprehensive protection technology against overcurrent, overvoltage, undervoltage, short-circuit, locked rotors, dry running without the need to install probes/sensors in the well.

5. You may connect controllers into pump groups, up to 5 pumps. Group control is carried out from the level selected by the user as the master controller, and the remaining pumps adjust the operation to the system requirements

APPLICATION:

The IVR-11 model is useful in all cases where it is necessary to maintain a constant water pressure in the system and to control and protect a single master pump, which handles automatic switching on and off by various electrical installations.

EXPECTED TYPICAL USAGE:

- farms
- water supply from wells
- irrigating greenhouses, gardens, fields
- collecting and using rain water

Input and output voltage	Type	Max Amperage	Power	Dimensions			Mounting hole (mm)
				L	W	H	
230 V single-phase input	IVR11-2S1R5A0	7A	1,5 kW	203	128	120	Ø4
230 V three-phase output							
400 V three-phase input	IVR11-4T2R2A0	5.1A	2,2 kW	203	128	120	Ø4
	IVR11-4T004A0	9A	4,0 kW	286	204	138	Ø6
	IVR11-4T7R5A0	17A	7,5 kW	286	204	138	Ø6

IVR-11

SPECIFICATIONS		
Control features	Control mode	V/F variable frequency control
	Starting torque	0.5 Hz ±100%
	Speed regulation range	1:100
	Precision in keeping speed	±1.0%
	Overload tolerance	150% of rated current for 60 s; 180% of rated current for 1 s
	Acceleration/deceleration time	0.1–3600 s
Input and output parameters	Starting frequency	0.01–10.00 Hz
	Input voltage	230 V AC od -18% do +10% 400 V AC od -18% do +10%
	Input frequency range	50/60 Hz, ±5% fluctuation
	Output voltage	0-rated input voltage
	Output frequency	0–200 Hz
External device interface	Programmable digital input	2-way digital output connector
	Programmable analogue input	V: 0–5 V V (remote pressure gauge): 0–10 V C (pressure transducer): 4–20 mA
	Relay output	Programmable 1-way output
	Open collector output	Programmable 1-way output
Basic functions	Command execution channel	Three kinds of channels: 1. Operation panel 2. Control terminal, 3. Serial communication port; select 1 and 2 for main drive and 3 for auxiliary devices
	Built-in PID controller	Advanced PID arithmetic for closed-loop control system operation
	Overrun speed control	Automatic current and voltage limitation during operation, preventing tripping due to frequent overcurrent or overvoltage
	Master and auxiliary drive connector	Expandable RS485 design, one drive in the system can be master and controls other auxiliary drives (up to four) for operating in a communication mode. The main drive sends PID feedback to the auxiliary drives and monitors their status in real time. Auxiliary drive faults do not affect the other drives.
	Protection against water shortage	If the drive detects that the pipe pressure is lower than the set water scarcity pressure value, the system automatically stops working. After the specified time has elapsed, it restarts automatically in certain cases. If the pressure is back to normal, the system is operating normally. Otherwise, the system stops automatically, which, if the pump is idle, extends its life to the maximum.
	High pressure alarm	When the pressure exceeds the set value, the system stops automatically, which avoids damaging the pipes due to overpressure.
Operating conditions	Automatic energy saving mode	This automatically lowers the output voltage under light load to save energy.
	Password setting	A 4-bit password can be set with non-zero numbers. After exiting the setting interface, the password will be valid in 1 minute.
	Locking parameters	Specify whether the parameter is locked in a running state or stopped from abnormal operation.
	Assembly	Installation should be performed in conditions devoid of direct sunlight, dust, corrosive, and flammable gases, oil mist, water vapour, and moisture.
	Height	Less than 1,000 m, more than 1,000 m guarantees full efficiency. Reduce the capacity by 1% every 100 m as the temperature increases.
	Ambient temperature	–10°C to +40°C operation at reduced capacity at 40°C to 50°C Reduce capacity by 4% in steps of 1°C as altitude increases.
	Humidity	≤95% RH, no water condensation.
	Vibration	<5.9 m / S2 (0.6 G)

INVERTER SYSTEM – IVR-400T

IVR-400T Intelligent Pump Controller is an easy-to-use control and protection device for direct connection of 11 kW to 37 kW (from 15 HP to 50 HP) three-phase submersible pumps, surface pumps, deep well pumps, etc., maintaining a constant, set water pressure by changing the rotational speed of the pump motor.

The IVR400T with a single-phase and three-phase frequency converter is designed specifically to manage pump performance in order to adapt it to various conditions and requirements of water supply systems.

The IVR400T makes the pump's operation more efficient, safe and intelligent, and allows to reduce energy consumption and extend the pump's lifespan.

The IVR400T is made of high quality components and materials, and it utilizes the latest microprocessor technology.

The IVR-400T provides many operating modes by adapting to various electrical systems. The IVR-400T controllers can be used in pump groups of up to 6 pumps - maximum 2 master devices and 4 auxiliary devices.

THE MOST IMPORTANT FEATURES THAT DISTINGUISH THE CONTROLLER FROM POPULAR ON/OFF CONTROL DEVICES ARE:

1. Increased energy efficiency. Compared to the traditional water supply method, the constant pressure water supply system with frequency converter saves up to 30%-60% of energy.
2. Simple operation: easy to use, all functions can be terminated by pressing a button without the need to hire programming specialists.
3. Long-term reliability of the co-operating pumps: the average torque and shaft wear are reduced due to decreasing the average rotational speed, which increases the pump operational lifetime.
- Due to the built-in soft start and stop function, the hydraulic stroke can be eliminated (the water hammer is a sudden pressure increase that occurs at rapid stopping or starting of liquid flow.)
4. Fully protected: the system incorporates the most versatile overcurrent, overvoltage, undervoltage, short-circuit, impeller blocking and dry-running protection technology without the need to install probes/sensors in the well.
5. The controllers can be combined into pump groups of up to 6 pumps. The group is controlled by one or two controllers selected by the user as master devices while other controllers adjust the operation to the system requirements.

APPLICATION:

The IVR-400T can be used in all applications where maintaining a constant water pressure in the system, as well as control and protection of a single pump that controls automatic switching on and off by various electrical systems is required.

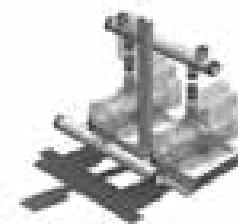

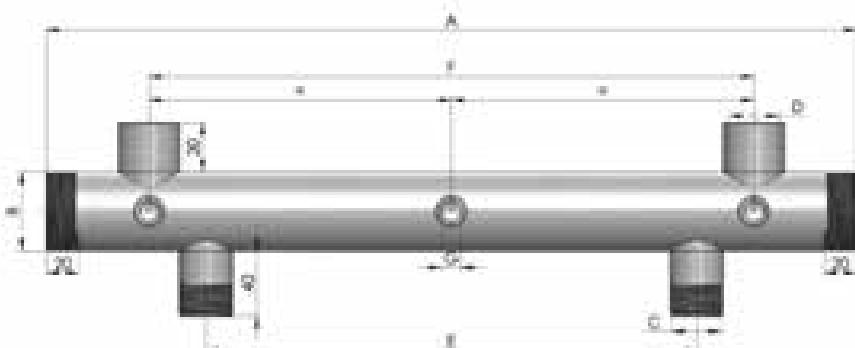

TYPICAL APPLICATION

- agriculture farms
- supply of water from the well
- irrigation of growing houses, gardens, agricultural land
- collecting and using rainwater
- industrial equipment

TECHNICAL PARAMETERS		
Control parameters	Control mode	V/F variable frequency control
	Starting torque	0.5 Hz ± 100%
	Speed adjustment range	1:100
	Speed holding accuracy	± 1.0%
	Overcurrent tolerance	150% of rated current for 60 s; 180% of rated current for 1 s
	Acceleration / deceleration time	0.1–3600s
Input and output parameters	Starting frequency	0.01–10.00 Hz
	Input voltage	400 V ± 15%
	Input frequency range	50 / 60 Hz, fluctuation ± 5%
	Output voltage	0-rated input voltage
	Output frequency	0–200Hz
Peripheral interface	Programmable digital input	2-way digital output connector
	Programmable analogue input	V: 0–5V V (remote pressure gauge): 0–10 V C (pressure transmitter): 4–20 mA
	Relay output	1-way output, programmable
	OC output	1-way output, programmable
Main functions	Command execution channel	Three types of channels: 1 Operation channel 2. Control terminal, 3. Serial communication port, select 1 and 2 for main drive, and 3 for auxiliaries
	Built-in PID controller	Advanced PID controller processing to operate the closed-loop control system
	Stall torque speed control	Automatic limitation of current and voltage during operation, which prevents tripping due to frequent overcurrent or overvoltage
	Master drive and auxiliary drives connector	Extensible RS485 design, one drive in the system can be master and control other auxiliary drives (up to four) to operate in communication mode. The master drive sends feedback from the PID controller to the auxiliary drives and monitors their status in real time. Faults of auxiliary drives do not affect other drives.
	Water shortage protection	If the drive detects that the pressure in the pipeline is lower than the set water shortage pressure, the system will automatically stop. After a certain period of time, it restarts automatically when specific conditions are met. If the pressure returns to normal, the system operates normally. Otherwise, the system stops automatically, which results in extending the idle pump's lifespan to a maximum.
	High pressure alarm	When the pressure exceeds the set value, the system stops automatically to prevent pipeline damage due to excessive pressure.
	Automatic power saving mode	To save energy, it automatically reduces output voltage at low load.
	Setting up password	A 4-bit password can be set using non-zero numbers. The password will be valid within 1 minute after leaving the setting interface.
Operating conditions	Locking the parameters	Specify whether the parameter is locked in the running or stopped condition in case of incorrect operation.
	Installation	Installation should be carried out in conditions free of direct sunlight, dust, corrosive and flammable gases, oil mist, water vapour and moisture.
	Height	Lower than 1 000 m; performance will decrease above 1 000 m. Reduce performance by 1% for every 100 m as temperature increases.
	Ambient temperature	–10°C to + 40°C operation with reduced performance at 40°C to 50°C. Reduce performance by 4% for every 1°C as height increases.
	Humidity	≤95% RH, non-condensing.
	Vibrations	<5,9 m / S2 (0,6 G)

MH PRO SET – IVR-11

Hydophore sets of a pump and an inverter. MH PRO pumps are self-priming centrifugal pumps of the highest quality. IVR-11 is an Intelligent Controller that controls the operation of the pump depending on the needs of the installation. The IVR-11 model is an easy-to-use control and protection device that maintains a constant set water pressure by changing the rotational speed of the pump motor. The main advantage of combining MH PRO series pumps with IVR-11 is the fact that they have 3x 230V power supply, compatible with IVR-11 series inverters. However, the set can be connected to a single-phase 1x 230V mains. Such a connection provides significant savings in electricity consumption.

The IVR-11 is a frequency converter drive, specially designed to manage the performance of a water pump. The unit can be adapted to a wide range of conditions and water supply requirements. The IVR-11 drive allows the pump to run more efficiently and safely, reduce energy consumption and extend the life of the pump. The IVR-11 drive is made of high-quality components and materials, and uses the latest microprocessor technology. MH PRO pumps is high quality device with a wide range of applications, from domestic installations to continuous operation in small industrial systems and agriculture. The pump shaft is made of AISI 304 stainless steel (DIN 1.4301), the rotor sleeves are made of brass, and the reinforced mechanical gland allows for use in liquids with a temperature of up to 70 degrees Celsius.

APPLICATION:

Household:

- water supply
- watering (including sprinkler operation)
- pressure boosting
- exploitation of rainwater

Farms:

- irrigation of greenhouses, gardens and fields
- collecting and using rainwater

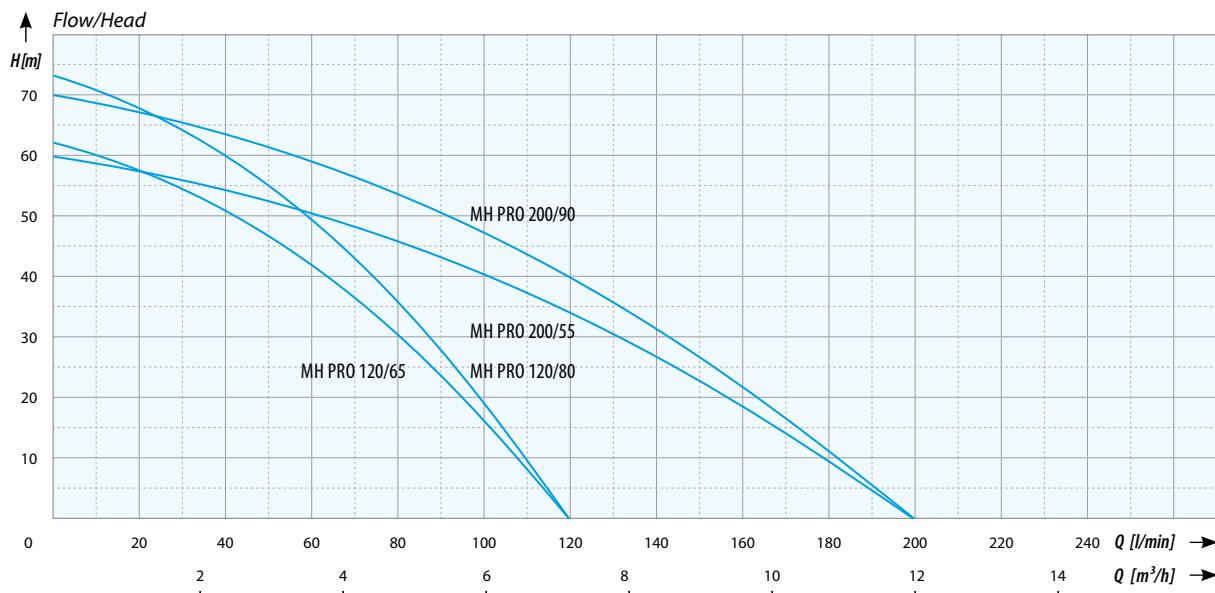

TECHNICAL DATA:

- Liquid temperature: ≤70 °C
- Ambient temperature: ≤50 °C
- Maximum system pressure: up to 10 bar
- Ingress protection: IP55
- Insulation class: F
- Possibility of alternating operation of the operated pumps
- Possibility to set up a standby pump in a multipump system

MATERIALS:

- Body: AISI 304 stainless steel.
- Shaft: AISI 304 stainless steel.
- Mechanical seal: SiC / SiC / EPDM
- Connections: cast iron
- Impellers, diffusers: noryl
- Base: cast iron
- Motor: closed-frame asynchronous squirrel-cage motor, aluminum housing, external ventilation.

MULTI SET IVR

The set is equipped with the IVR-09 (400V) / IVR-11(400V) frequency converter and the CV series pump/pumps. Multi-Set is an easy-to-use device designed for pumping of clean water in order to increase pressure in water supply systems, maintaining a constant, set water pressure by changing the rotational speed of the pump motor, with additional control and protection features.

CHARACTERISTICS:

- Energy efficiency: reduction of energy consumption by 30%–60%..
- Simple operation: all functions can be terminated by pressing a button.
- Reliability: the average torque and shaft wear are reduced due to decreasing the average rotational speed, which increases the pump operational lifetime. Due to the built-in soft start and stop function, the device allows to eliminate the water hammer.
- Fully protected: the system incorporates the overcurrent, overvoltage, undervoltage, short-circuit, impeller blocking and dry-running protection technology without the need to install probes/sensors in the well.
- The ability to control the operation of two pumps that supply the system.
- Low-noise operation.

TECHNICAL DATA:

- Pumps x 1/x 2/x 3/x 4/x 5/x 6 - (CV3 – Cv15)
- Frequency converter - IVR-09 (400V) / IVR-11 (400V)
- IBO ITALY steel fittings
- Check and water stop valves and fittings
- IBO ITALY pressure vessel

APPLICATION:

- Houses
- Apartments
- Holiday houses
- Agricultural holdings
- Supply of water from the well
- Irrigation of growing houses, gardens, agricultural land
- Collecting and using rainwater

NOTES

SPINOX Deep well pumps

4" SPINOX
6" SPINOX
8" SPINOX
10" SPINOX
12" SPINOX

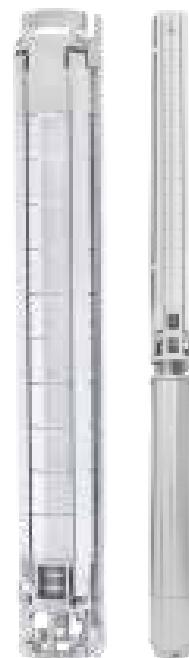

4"SPINOX

Multistage deep well pumps with a diameter of 98 mm, entirely made of stainless steel, are designed for installation in wells with a minimum internal diameter of 115 mm. The pumps are used to supply water to single- and multi-family houses, farms, and to supply irrigation systems (sprinklers, drip lines). The pumps are also used in industry and drainage.

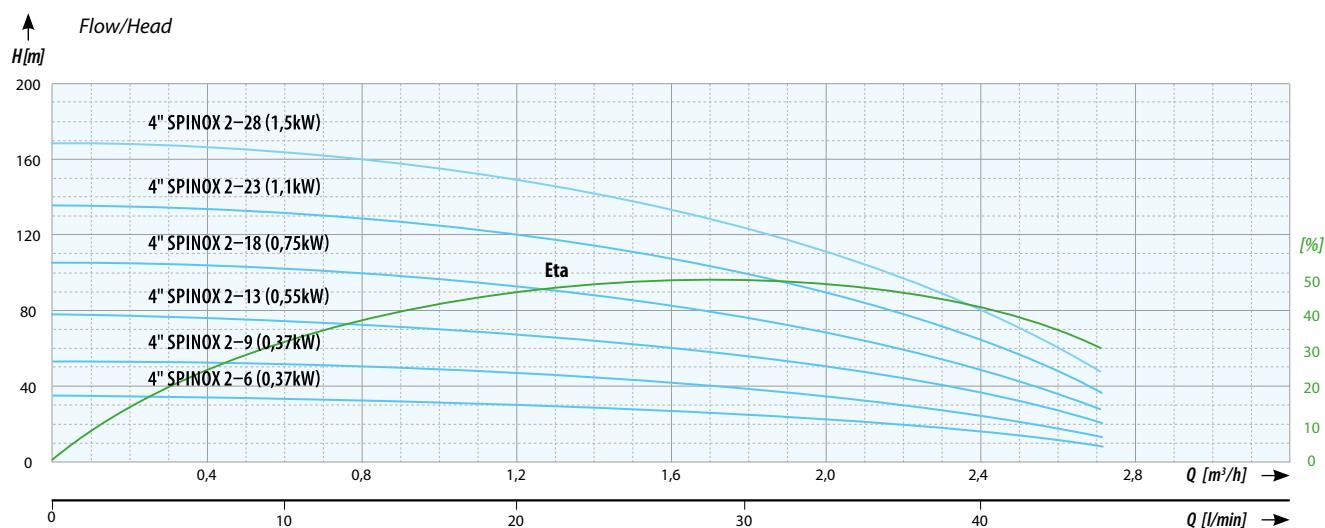

CHARACTERISTICS:

- Pumps made entirely of stainless steel
- Increased wear resistance
- Built-in check valve
- Available with water motors - WMC by IPRO, oil - IOM by IPRO or IBO Italy
- Starting box (230V version) with built-in overcurrent protection and capacitor
- Thermal protection built into the motor winding (230V version)
- Possibility to attach a cable of a specific length (multiples of 5m)
- 24-month warranty
- Warranty and post-warranty service

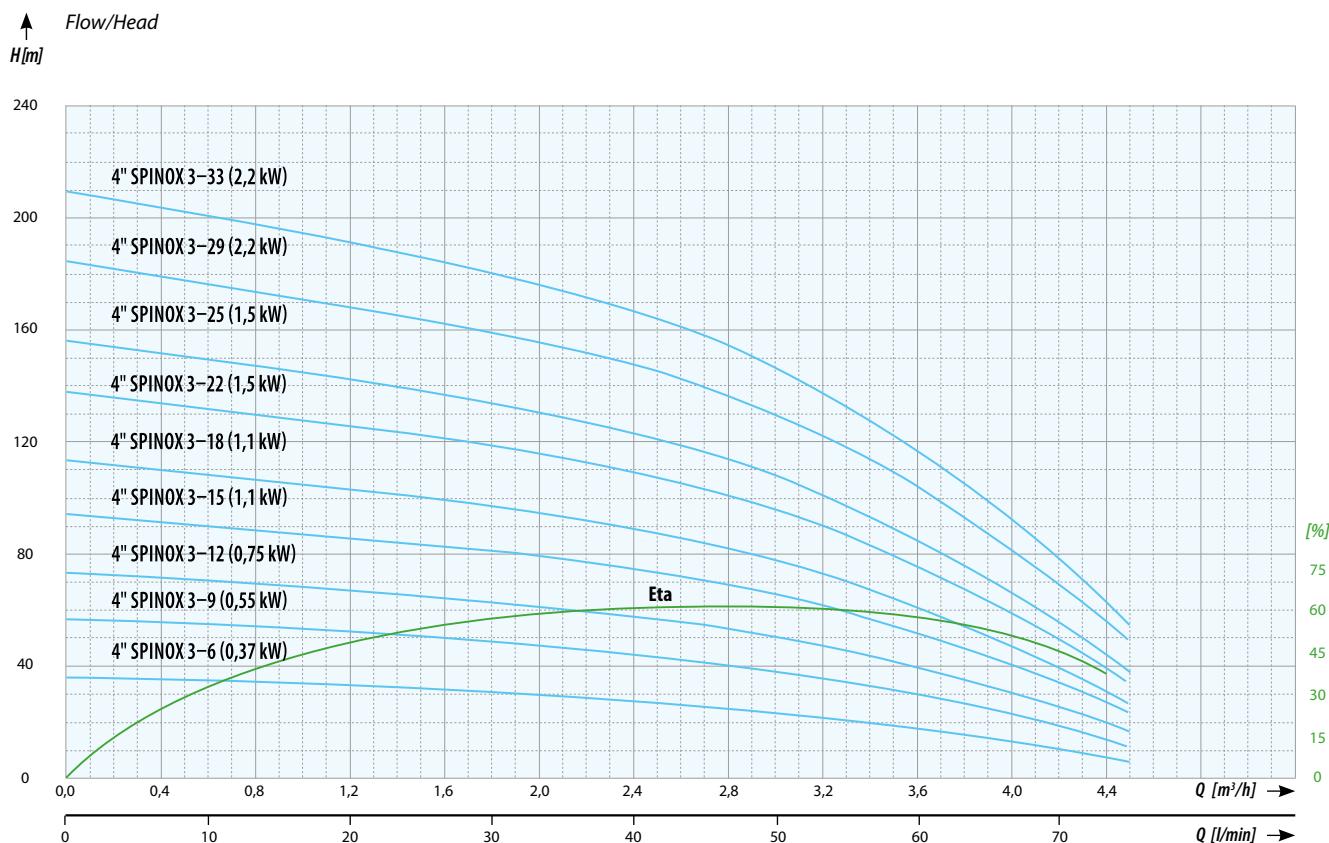

TECHNICAL DATA:

- Maximum liquid temperature: 35°C
- Power supply: 400V
- Insulation class: F
- Operating mode: continuous
- Ingress protection: IP68
- Length of the power cord: 1.5m
- Working position: vertical/horizontal
- Motor speed: 2850 RPM

6"SPINOX

Multistage deep well pumps with a diameter of 145mm, made entirely of stainless steel, are designed for installation in wells with a minimum internal diameter of 160mm. The pumps are used to supply water to multi-family houses, farms, irrigation systems, sprinklers, and lowering the groundwater level. The pumps are also used in water supply and fire protection systems.

CHARACTERISTICS:

- Pumps made entirely of stainless steel
- Increased wear resistance
- Built-in check valve
- Available with water motors - WMC by IPRO, olejowymi - IOM by IPRO or IBO Italy
- Possibility to attach a cable of a specific length (multiples of 5m)
- 24-month warranty
- Warranty and post-warranty service

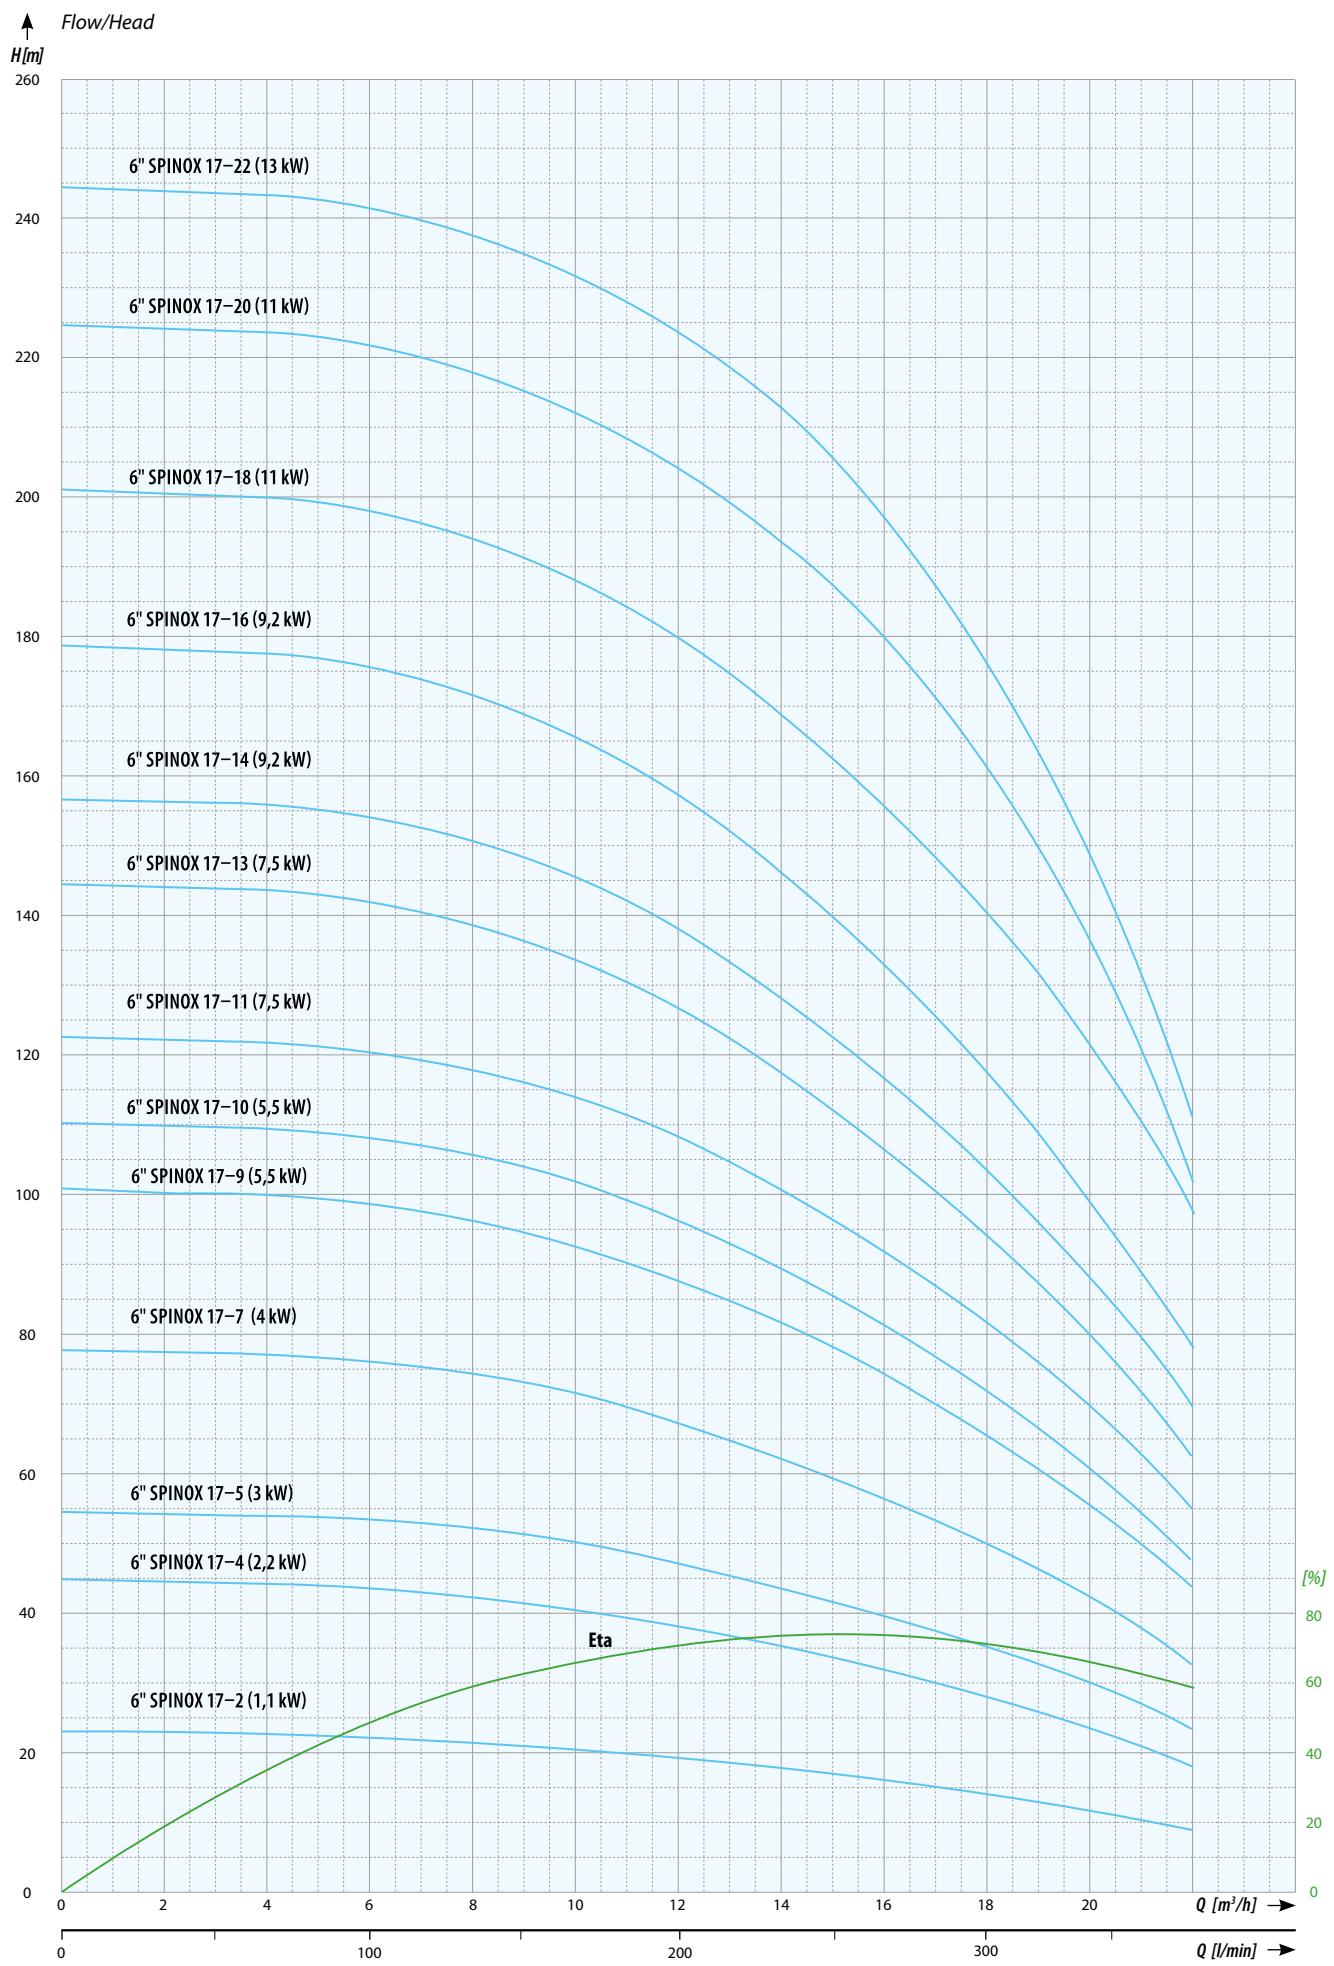

TECHNICAL DATA:

- Maximum liquid temperature: 35°C
- Power supply: 400V
- Insulation class: F
- Operating mode: continuous
- Ingress protection: IP68
- Length of the power cord: 1.5m
- Working position: vertical/horizontal
- Motor speed: 2850 RPM

Flow/Head

8"SPINOX

Multistage deep well pumps with a diameter of 175mm, made entirely of stainless steel, are designed for installation in wells with a minimum internal diameter of 220mm. The pumps are used to supply water to multi-family houses, farms, irrigation systems, sprinklers, and lowering the groundwater level. The pumps are also used in water supply and fire protection systems.

CHARACTERISTICS:

- Pumps made entirely of stainless steel
- Increased wear resistance
- Built-in check valve
- Available with water motors - WMC by IPRO, oil - IOM by IPRO or IBO Italy
- Possibility to attach a cable of a specific length (multiples of 5m)
- 24-month warranty
- Warranty and post-warranty service

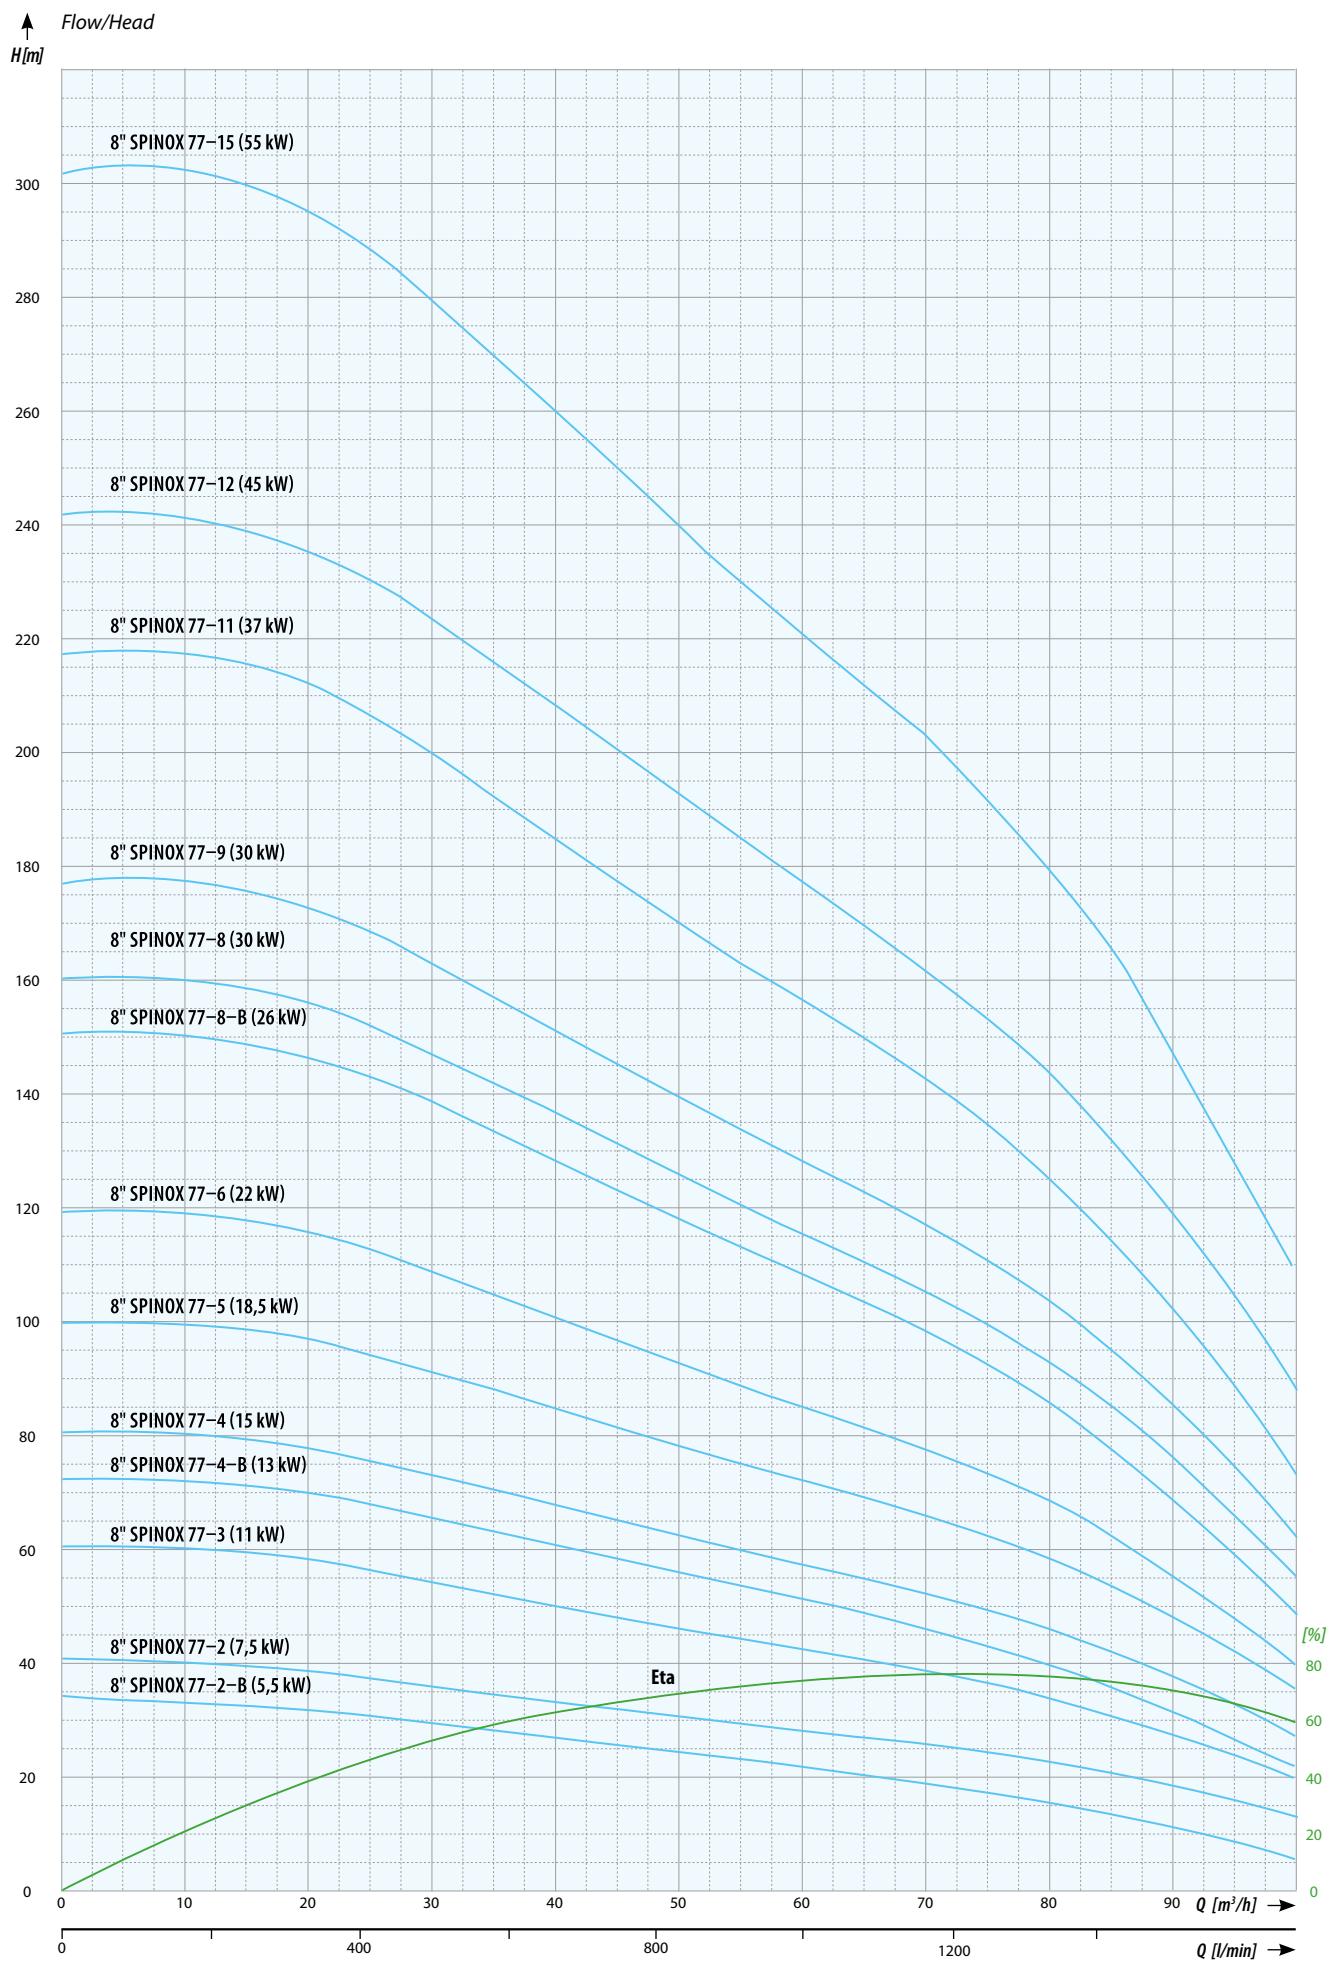

TECHNICAL DATA:

- Maximum liquid temperature: 35°C
- Power supply: 400V
- Insulation class: F
- Operating mode: continuous
- Ingress protection: IP68
- Length of the power cord: 1.5m
- Working position: vertical/horizontal
- Motor speed: 2850 RPM

Multistage deep well pumps with a diameter of 215mm, made entirely of stainless steel, are designed for installation in wells with a minimum internal diameter of 280mm. The pumps are used to supply water to multi-family houses, farms, irrigation systems, sprinklers, and lowering the groundwater level. The pumps are also used in water supply and fire protection systems.

CHARACTERISTICS:

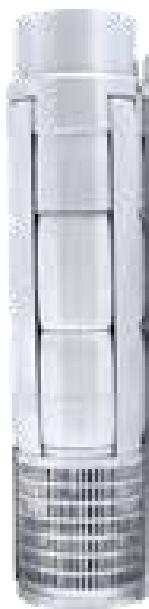

- Pumps made entirely of stainless steel
- Increased wear resistance
- Built-in check valve
- Available with water motors - WMC by IPRO or IBO ITALY
- Possibility to attach a cable of a specific length (multiples of 5m)
- 24-month warranty
- Warranty and post-warranty service

TECHNICAL DATA:

- Maximum liquid temperature: 35°C
- Power supply: 400V
- Insulation class: F
- Operating mode: continuous
- Ingress protection: IP68
- Length of the power cord: 1.5m
- Working position: vertical/horizontal
- Motor speed: 2850 RPM

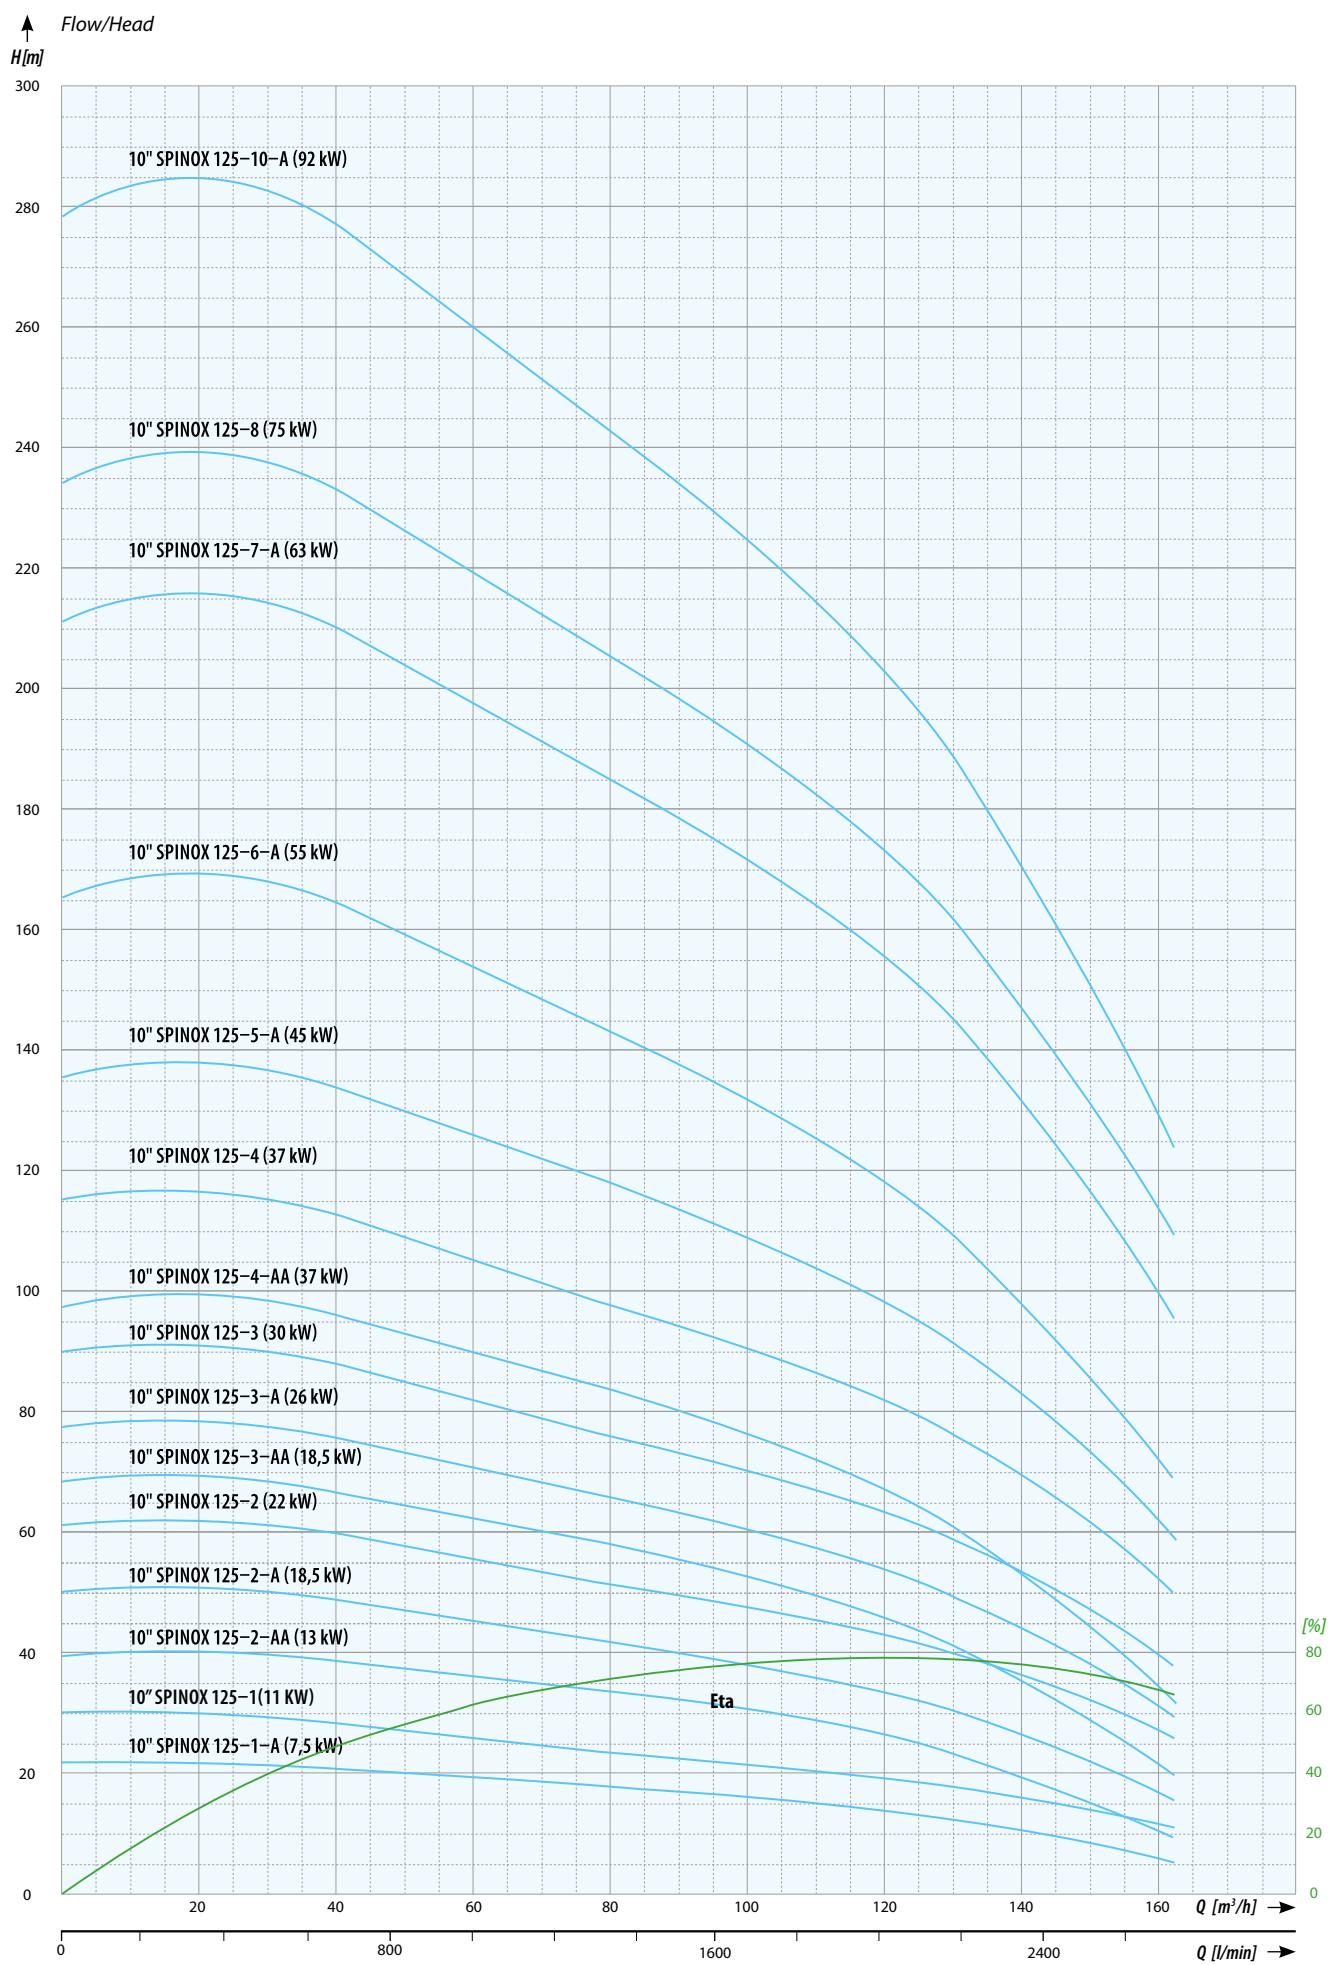

MATERIALS:

- Suction / discharge port: AISI 304 stainless steel
- Housing: AISI 304 stainless steel
- Shaft and rotor: AISI 304 stainless steel
- Impeller: AISI 304 stainless steel
- Diffuser: AISI 304 stainless steel
- Mechanical seal: Ceramic / Sic / NBR

Multistage deep well pumps with a diameter of 235mm, made entirely of stainless steel, are designed for installation in wells with a minimum internal diameter of 315mm. The pumps are used to supply water to multi-family houses, farms, irrigation systems, sprinklers, and lowering the groundwater level. The pumps are also used in water supply and fire protection systems.

CHARACTERISTICS:

- Pumps made entirely of stainless steel
- Increased wear resistance
- Built-in check valve
- Available with water motors - WMC by IPRO
- Possibility to attach a cable of a specific length (multiples of 5m)
- 24-month warranty
- Warranty and post-warranty service

TECHNICAL DATA:

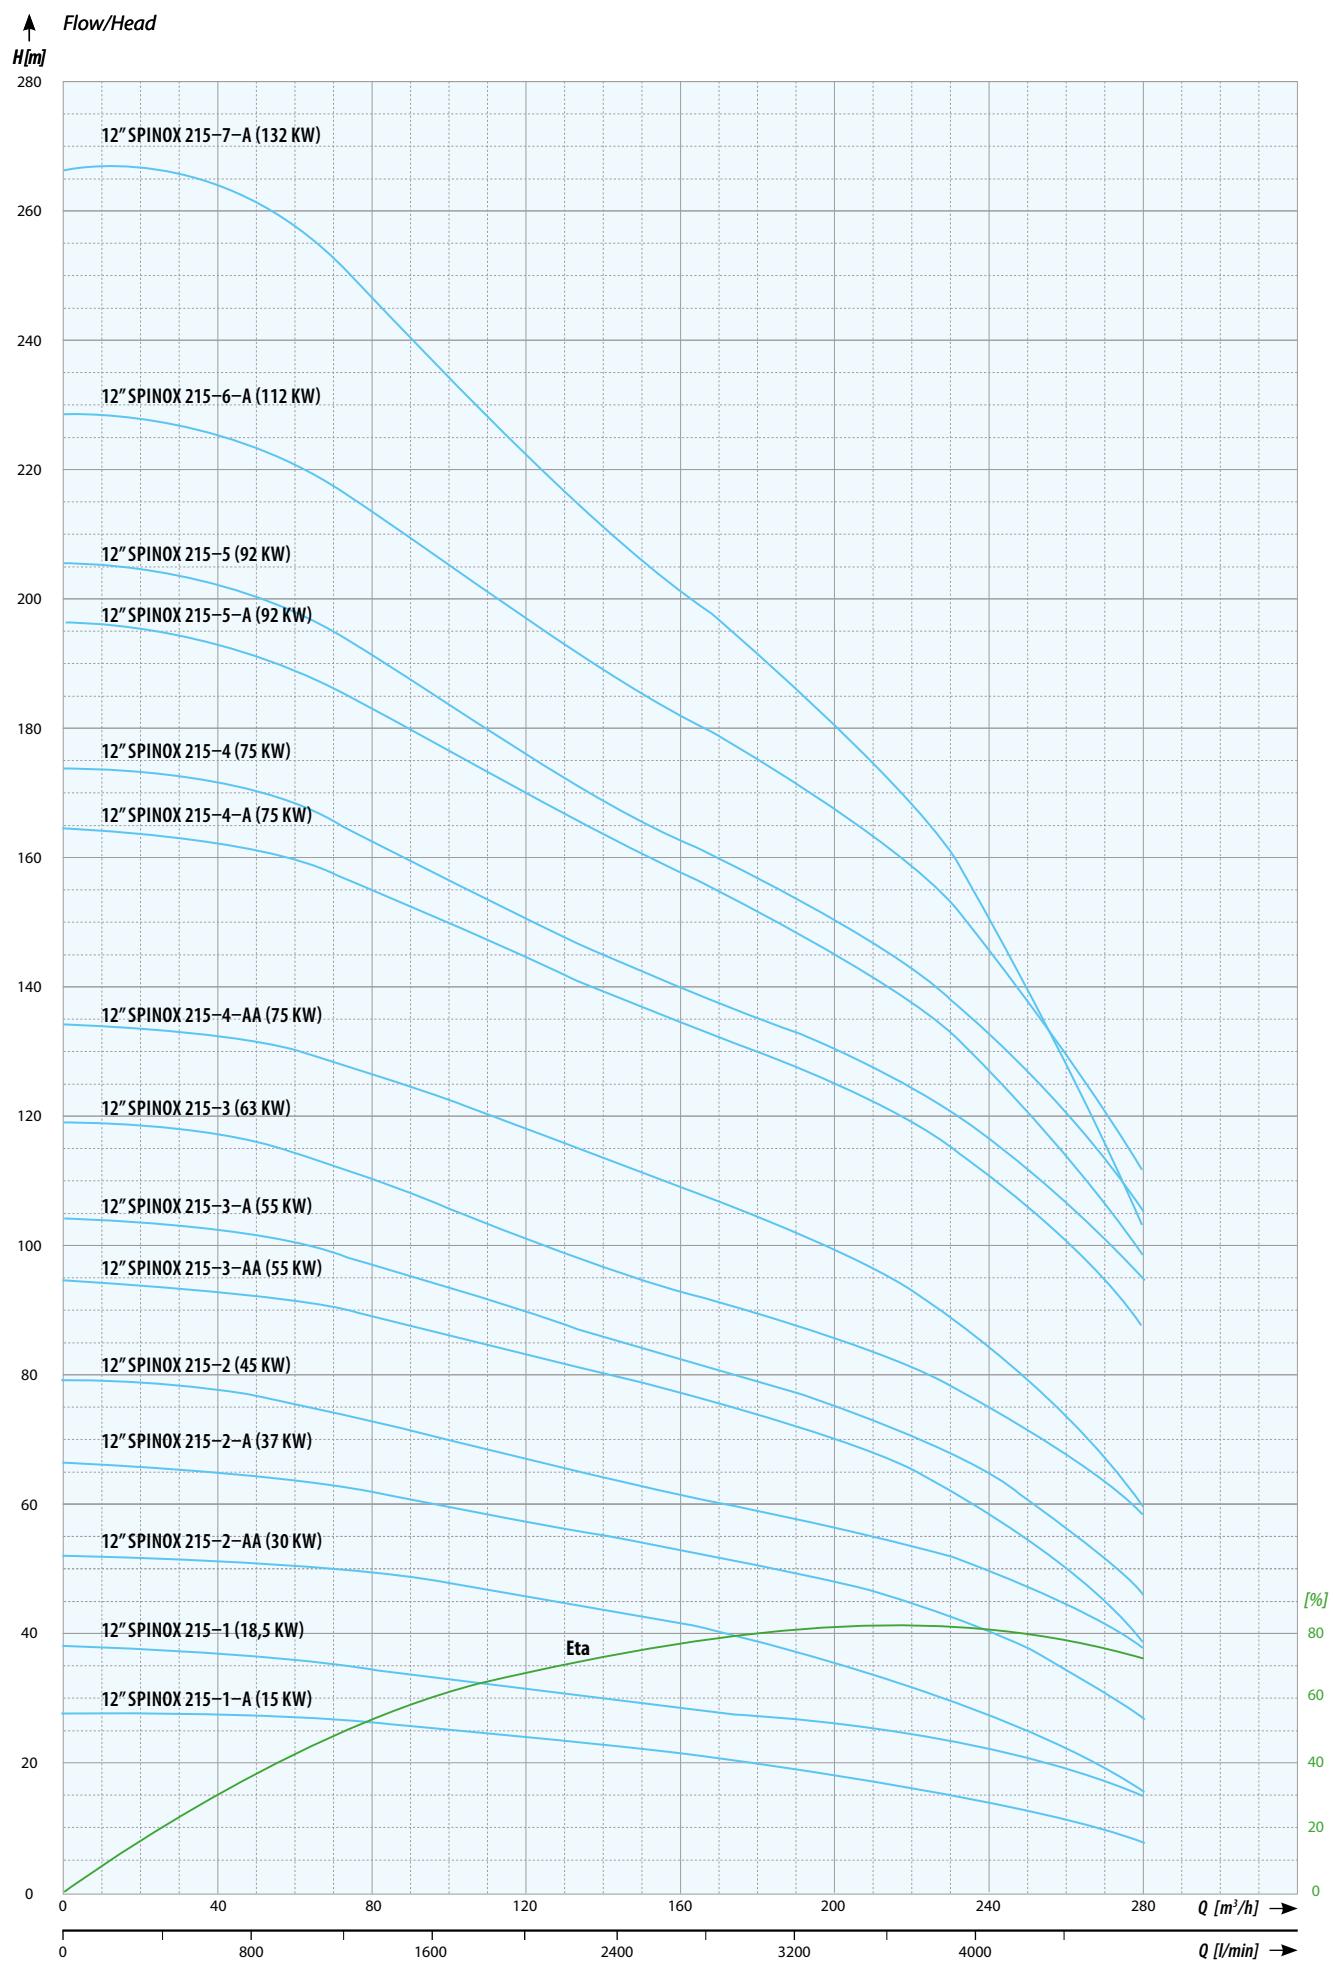

- Maximum liquid temperature: 35°C
- Power supply: 400V
- Insulation class: F
- Operating mode: continuous
- Ingress protection: IP68
- Length of the power cord: 1.5m
- Working position: vertical
- Motor speed: 2850 RPM

MATERIALS:

- Suction / discharge port: AISI 304 stainless steel
- Housing: AISI 304 stainless steel
- Shaft and rotor: AISI 304 stainless steel
- Impeller: AISI 304 stainless steel
- Diffuser: AISI 304 stainless steel
- Mechanical seal: Ceramic / Sic / NBR

NOTES

Deep well pumps

3" IPRO
3,5" IPRO
4" IPRO

3" IPRO

increased resistance to sand

Multistage deep well pumps with a diameter of 76 mm, with increased sand resistance are designed for installation in wells with a minimum internal diameter of 90 mm. Power supply 230 V~/50 Hz. The effect of increased sand resistance was achieved thanks to the use of "floating rotors" and selecting wear-resistant materials: stainless steel and reinforced plastic. Pumps are equipped with thermal protection installed in the motor winding and 20 m power cord.

The pumps are used to supply water to single- and multi-family houses, farms, as well as to supply irrigation systems (sprinklers, drip lines) and drainage systems

TECHNICAL DATA:

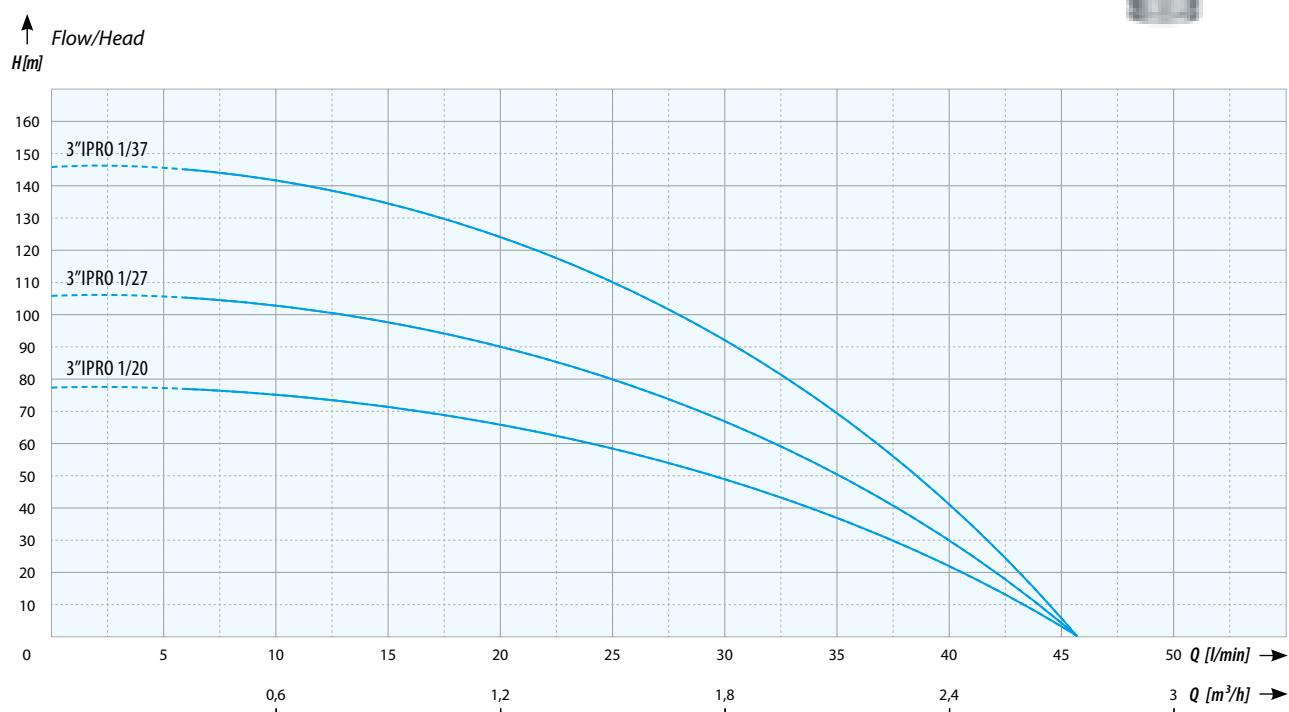

- Maximum liquid temperature: 35°C
- Maximum ambient temperature: 35°C
- Power supply: 230 V
- Insulation class: F
- Operating mode: continuous
- Ingress protection: IP68
- Length of the power cord: 20 m
- Working position: vertical / horizontal
- Max. number of starts per 1h: 30
- Max. immersion depth: 100 m
- Motor speed: 2850 RPM

CHARACTERISTICS:

- Increased resistance to sand
- The highest quality materials
- Long failure-free operation based on Italian technology
- 20 m power cable with a plug
- Thermal protection built into the motor winding
- Capacitor built into the motor
(no need for an external junction box)
- 36-month warranty
- Warranty and post-warranty service

MATERIALS:

- Suction / discharge port: AISI 304 stainless steel
- Housing: AISI 304 stainless steel
- Shaft and rotor: AISI 304 stainless steel
- Impeller: PPO
- Diffuser: reinforced polycarbonate
- Mechanical seal: Ceramic / Sic / NBR
- Bearings: NSK
- Engine: Oil cooled

increased resistance to sand

Multistage deep well pumps with a diameter of 99 mm, with increased sand resistance, are designed for installation in wells with a minimum internal diameter of 110 mm. Power supply 230 V~/50 Hz. The effect of increased sand resistance was achieved thanks to the use of "floating rotors" and selecting wear-resistant materials: stainless steel and reinforced plastic. Pumps are equipped with thermal protection installed in the motor winding and 20-metre power cord.

They are still one of the few on the market to have structures with such high resistance to sand. The maximum sand content in the water is up to 5%.

The pumps are used to supply water to single- and multi-family houses, farms, as well as to supply irrigation systems (sprinklers, drip lines) and drainage systems, water supply installations. Industry.

CHARACTERISTICS:

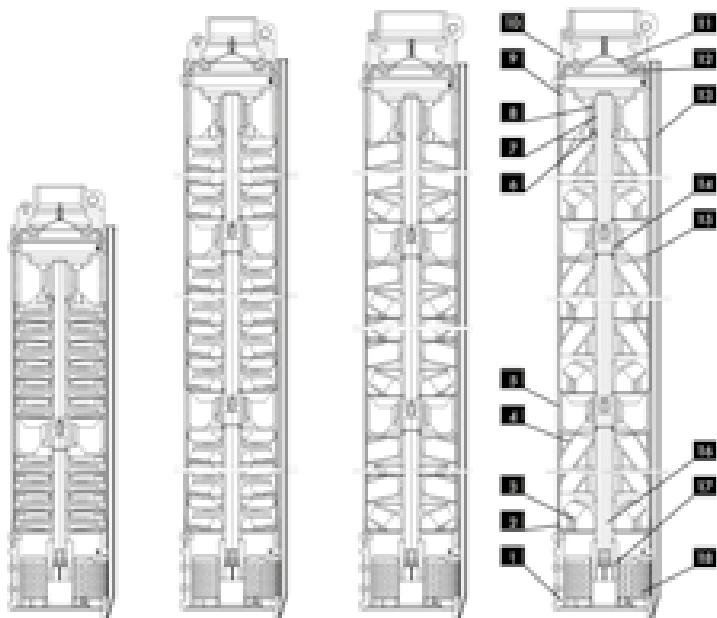

- Increased resistance to sand
- The highest quality materials
- Long failure-free operation based on Italian technology
- 20 m power cable with a plug
- Thermal protection built into the motor winding
- Capacitor built into the motor
(no need for an external junction box)

4" IPRO OIL MOTORS

High quality 4" deep well motors, cooled with white, highly refined mineral oil, approved for contact with drinking water (FFA approval) oil. Demanding tests at every stage of production, the expertise of engineers and premium materials ensure high quality, reliability and Italian technology ensure high mechanical resistance and very good electrical properties of the product. The durable construction allows it to operate for a long time without any maintenance. The electric cable ended with a detachable gland ensures perfect tightness. The motors have a diameter of 4" - 98 mm.

CHARACTERISTICS:

- Made according to the NEMA standard
- Top quality materials
- Long failure-free operation
- Can cooperate with a converter
- Possibility of connecting a cable of a specified length (a multiple of 5m)
- Starter box (in 230V version) with integrated overcurrent protection and capacitor
- Thermal protection built into the motor winding (230V version)
- Warranty 36 months**
- Warranty and post-warranty service

TECHNICAL DATA:

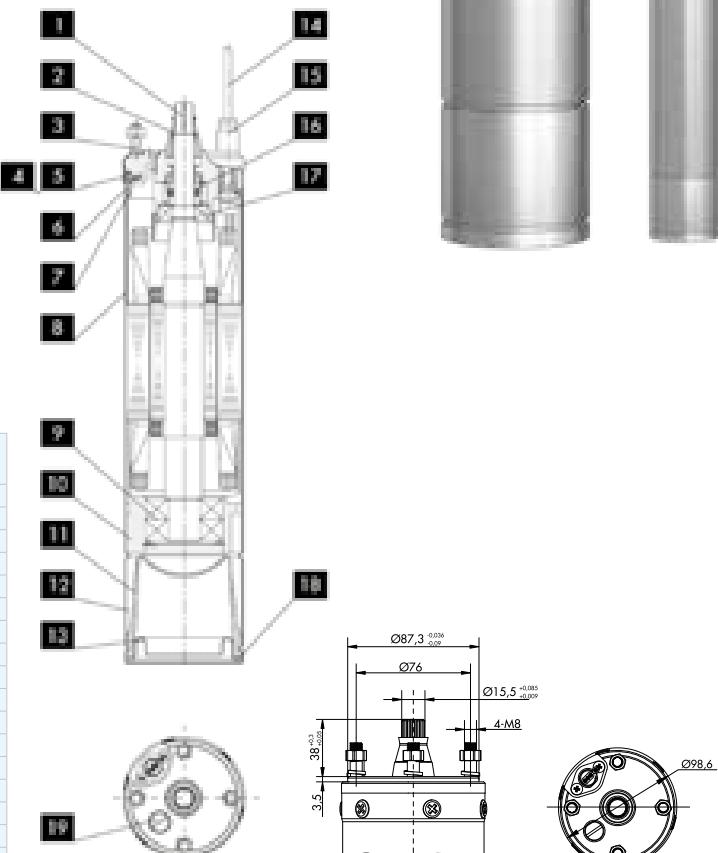

- Maximum liquid temperature: 35°C
- Power supply: 230V or 400V
- Insulation class: F
- Operation mode: continuous
- Ingress protection: IP68
- Power cable length: 1.5 m
- Operation position: vertical/horizontal
- Max. number of start-ups per 1h: 30
- Max. depth of immersion: 150 m
- Min. water flow around the motor: 0.15 m/s
- Motor speed: 2,850 RPM

MATERIALS:

- Cooling agent: biodegradable, non-toxic oil
- Motor housing: stainless steel AISI 304
- Shaft: AISI 304SS Inner part of the rotor made of carbon steel alloy for improving the electrical properties of the motor. This combination gives ideal corrosion resistance and high mechanical resistance necessary for high dynamic loads.
- Mechanical seal: silicon carbide/carbon
- REPLACEABLE CABLE GLAND:** Ensures a perfect seal under the toughest conditions and facilitates cable removal for maintenance. The electric cable ended with a detachable gland ensures perfect tightness.

100% TESTED: All motors are tested at the end of production. The testing includes electrical, mechanical, and tightness tests.

4" WMC WATER IPRO MOTORS

High-quality 4" water-cooled submersible motors. Demanding tests at every stage of production, expert knowledge of engineers and high-quality materials ensure high quality, reliability, and excellent electrical properties of this product. Durable construction for long and maintenance-free operation. The WMC motor series is designed to drive submersible pumps in accordance with the standard EN60034-1 (IEC 60034-1) in line with the supply voltage and frequency requirements indicated on the nameplate. Shaft height and flange dimensions in accordance with NEMA MG1: 2006 REV 1-2007.

All motors can be operated by a frequency inverter (30 Hz - 50/60 Hz).

Engine with optional equipment - SOFT START:
Maximum acceleration time (intermediate start) should not be longer than 3 seconds.

CHARACTERISTICS:

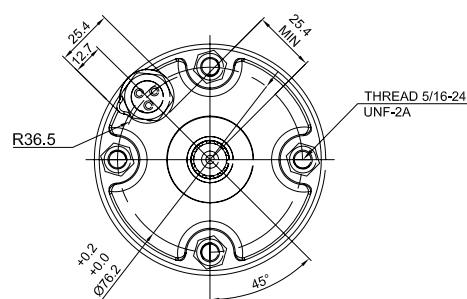

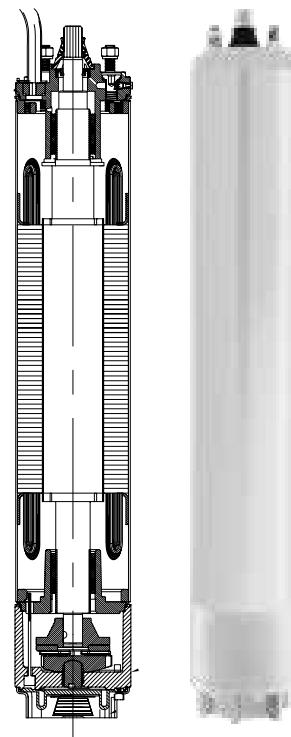

- Single-phase version from 0.37kW to 3.7kW
- Three-phase version from 0.37kW to 7.5kW
- Made in the NEMA standard
- The highest quality materials
- Sand protection system
- Long trouble-free operation
- Inverter compatible
- Possibility of attaching a cable of a specified length (multiples of 5m)
- Detachable power cord with waterproof plug for easy repair or replacement
- Starting box (230V version) with built-in overcurrent protection and capacitor
- Thermal protection incorporated into the motor winding (230V version)
- **Warranty 36 months**
- Warranty and post-warranty service

TECHNICAL DATA:

- Maximum liquid temperature: 35°C
- Power supply: 230V or 400V
- Insulation class: F
- Operating mode: continuous
- Ingress protection: IP68
- Power cord length: 1.5m
- Working position: vertical/horizontal
- Max. number of start-ups per 1h: 30
- Max. immersion depth: 150m
- Min. water flow around engine: 0.15m/s
- Motor speed: 2850 RPM
- Maximum supply voltage fluctuation: -10% / +6% of the nominal value
- Outer diameter: 98mm

MATERIALS:

- Coolant: water
- Motor housing: stainless steel AISI 304
- Shaft: stainless steel AISI 304
- Mechanical seal: silicon carbide/carbon
- Outer part of the shaft: DUPLEX
- Seals: NBR
- Membrane: EPDM

6" WMC WATER IPRO MOTORS

The 6" WMC are submersible motors made in accordance with the standard EN60034-1 (IEC 60034-1). Shaft height and flange dimensions according to NEMA MG1: 2006 REV 1-2007. High-quality 6" water-cooled submersible motors with 143mm diameter and anti-freeze coolant. Demanding tests at every stage of production, expert knowledge of engineers and high-quality materials ensure high quality, reliability, and excellent electrical properties of this product. Durable construction for long and maintenance-free operation.

All motors can be powered by a frequency inverter (30 Hz - 50/60 Hz).

Motor with optional equipment - SOFT START: Maximum acceleration time (intermediate start) should not be longer than 1.5 sec for 6" motors.

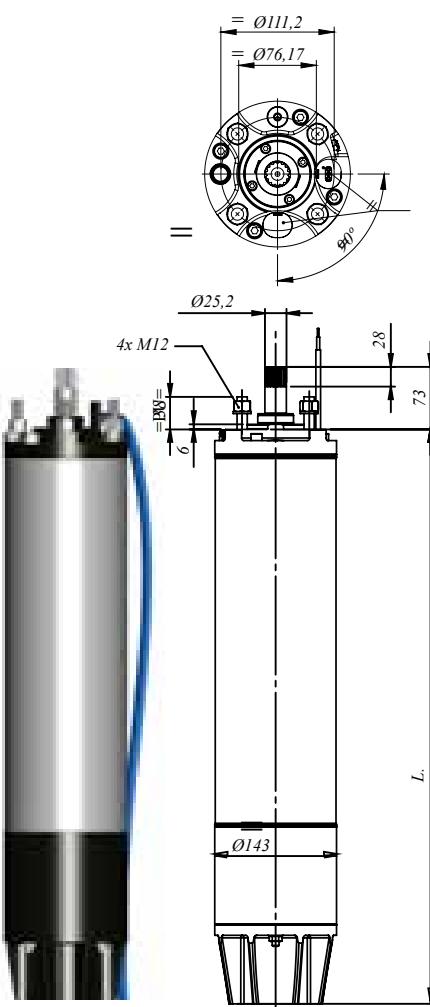

CHARACTERISTICS:

- Made in the NEMA standard
- The highest quality materials
- Long trouble-free operation
- Storage temperature up to (-15°C) - 60 °C
- Inverter compatible
- Possibility of attaching a cable of a specified length (multiples of 5m)
- Warranty 36 months**
- Warranty and post-warranty service
- Max. number of start-ups per 1h: 20
- Max. immersion depth: 150m
- Shaft load: 22000N for 5.5-7.5kW motors, 25000N for 9.2-18.5kW motors
- Min.water flow around motor: 0.5m/s
- Maximum supply voltage fluctuation: -10% / +6% of the nominal value

TECHNICAL DATA:

- Maximum liquid temperature: 35°C
- Power supply: 400V
- Insulation class: F
- Operating mode: continuous
- Ingress protection: IP68
- Power cord length: 3.5m
- Working position: vertical/horizontal
- Coolant: water + anti-freeze coolant.
- Stator housing: stainless steel AISI 304
- Shaft: stainless steel AISI 431
- Mechanical seal: silicon carbide/silicon carbide
- Bearing: carbon, resistant to heavy axial loads

MATERIALS:

8" WMC WATER IPRO MOTORS

High-quality 8" water-cooled submersible pump motors with 191mm diameter and anti-freeze coolant. Demanding tests at every stage of production, expert knowledge of engineers and high-quality materials ensure high quality, reliability, and excellent electrical properties of this product. Durable construction for long and maintenance-free operation.

CHARACTERISTICS:

- Made in the NEMA standard
- The highest quality materials
- Long trouble-free operation
- Storage temperature (-15°C) - 60 °C
- Inverter compatible
- Possibility of attaching a cable of a specified length (multiples of 5m)
- Warranty 36 months**
- Warranty and post-warranty service

TECHNICAL DATA:

- Maximum liquid temperature: 35°C
- Power supply: 400V
- Insulation class: F
- Operating mode: continuous
- Ingress protection: IP68
- Power cord length: 4m
- Working position: vertical/horizontal

- Max. number of start-ups per 1h: 15
- Max. immersion depth: 150m
- Shaft load: 40000N
- Min. water flow around engine: 0.5m/s
- Maximum supply voltage fluctuation: -10% / +6% of the nominal value

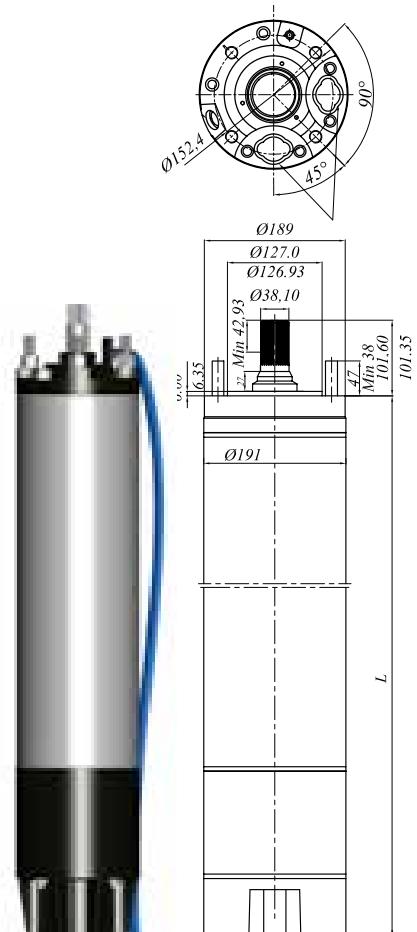

Motor powered by a frequency converter.

All motors can be powered by a frequency converter (30 Hz - 50/60 Hz).

Engine with optional equipment - SOFT START:
Maximum acceleration time (intermediate start) should not be longer than 1.5 sec for 8" motors.

MATERIALS:

- Coolant: water
- Motor housing: stainless steel AISI 304
- Shaft: stainless steel AISI 431
- Mechanical seal: silicon carbide/silicon carbide
- bearing: carbon, resistant to heavy axial loads

10" WMC WATER IPRO MOTORS

High-quality 10" water-cooled submersible motors with 236mm diameter and antifreeze coolant. Demanding tests at every stage of production, expert knowledge of engineers and high-quality materials ensure high quality, reliability, and excellent electrical properties of this product. Durable construction for long and maintenance-free operation.

Motor powered by a frequency converter.

All motors can be powered by a frequency converter (30 Hz - 50/60 Hz). Engine with optional equipment - SOFT START: Maximum acceleration time (intermediate start) should not be longer than 1.5 sec for 10" motors.

CHARACTERISTICS:

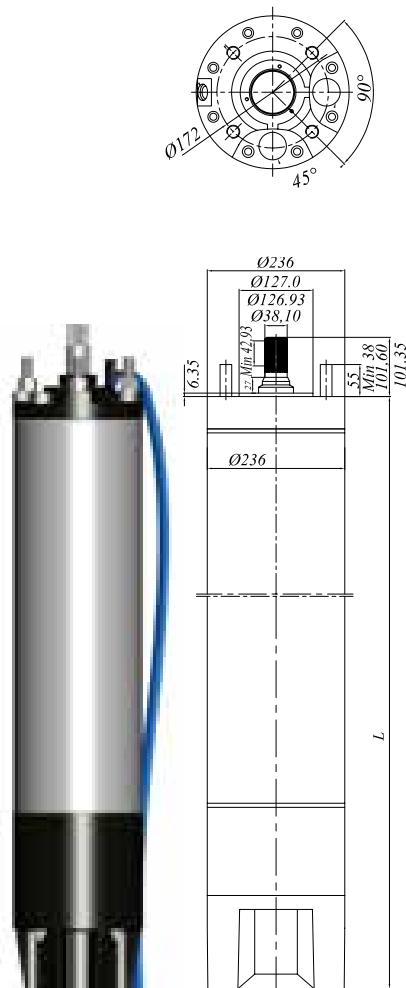

- Made in the NEMA standard
- The highest quality materials
- Long trouble-free operation
- Storage temperature (-15°C) - 60 °C
- Inverter compatible
- Possibility of attaching a cable of a specified length (multiples of 5m)

Vessels

***IPRO MEMBRANE VESSELS FIX MEMBRANE
IPRO MEMBRANE VESSELS FIX MEMBRANE
FIX DRAINAGE TANKS***

IPRO MEMBRANE VESSELS

FIX MEMBRANE

Horizontal fix membrane pressure tanks for use with drinking water. In order to minimize pump vibration, the tank's baseplate and legs are made of plastic. Tanks are available with 24, 50, 80 and 100 litres capacity. Inside the steel vessel there is a fix membrane made of butyl rubber with high tensile strength and high temperature resistance, separating the liquid from the air.

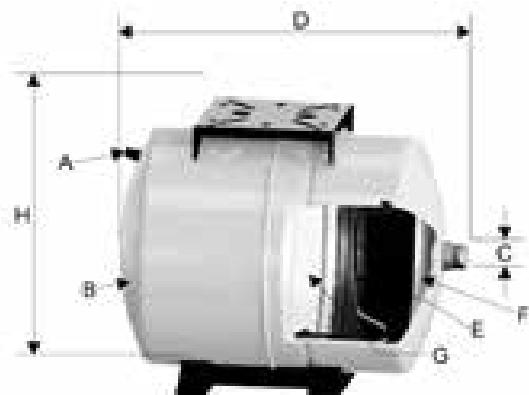

TANK SPECIFICATION:

- 1" stainless steel connection
- Outer surface with two-coat acrylic epoxy and polyurethane paint
- Compliant with the Pressure Equipment Directive (PED) 2014/68/UE
- Maximum operating pressure - 10 bar

MEMBRANE SPECIFICATION:

- Made of butyl rubber
- Hygienic approval

- A. Sealed air valve
- B. Two-coat epoxy and polyurethane paint
- C. 1"stainless steel connection
- D. Diameter
- E. Membrane made of approved butyl rubber
- F. Approved outer coating
- G. Precharge pressure - 2bar
- H. Height

FIX DRAINAGE TANKS

IPRO MEMBRANE CO / CWU / SOLAR

Diaphragm vessels with a non-replaceable membrane - IPRO FIX

Diaphragm vessel, used to prevent excessive pressure build-up in closed systems. IPRO FIX expansion vessels are designed for:

- hot and cold drinking water supply systems to maintain and stabilize the system pressure changes resulting from the increase in water volume.
- heating and solar systems to maintain and stabilize the system pressure changes resulting from the increase in fluid volume and temperature.

Inside the steel vessel there is a fix membrane made of butyl rubber with high tensile strength and high temperature resistance, separating the liquid from the air. The vessels are intended for systems with the maximum 50% glycol content

TANK SPECIFICATION:

- 1" thick stainless steel connection
- Outer surface with two-coat acrylic epoxy and polyurethane paint
- Compliant with the Pressure Equipment Directive (PED) 2014/68/UE
- Maximum operating pressure - 10 bar

Circulating pumps

API

API

Energy-saving electronic circulation pumps which meet the requirements of A-rated pumps.

PWM CONTROL

The energy efficiency index of API series pumps is:

EEI<=0,20

Energy-saving pumps are designed for forcing the circulation of central heating and in solar installations. The pumps are equipped with an electronic processor which automatically controls the operation of the pumps, which, in combination with a frequency converter, allows for significant savings in electricity consumption. The processor used allows you to choose one of 9 operating modes, depending on the needs of the installation. The current consumption is from 1/10 to 1/3 compared to classic pumps. The pump set includes a set of screw connections and a power cord.

Additional advantage of pump is the screw at the end of control box with allow to easy way vent the system.

APPLICATION:

The API series circulation pump is best suited for the following systems:

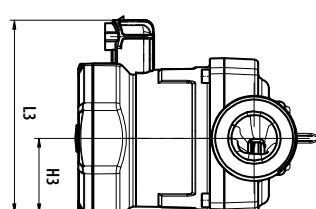

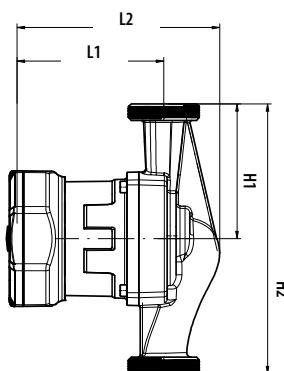

- Constant temperature heating system with variable flow
- Variable pipe temperature heating system
- Heating system with night mode
- Air conditioning system
- Industrial circulation system
- Home central heating system and domestic hot water system.

THE PUMP HAS 9 OPERATING MODES:

- AUTO(factory setting)
- High to low, proportional pressure characteristic curve
- LPP / HPP- Proportional pressure curves
- LCP / HCP- Constant pressure curves
- I / II / III- Constant speed curves.
- PWM- Parameters modulated by PWM signal

WATER PASS SWITCH

ELECTRICAL CABLES

IPRO IPC 122M / IPC 130M INTELLIGENT WATER PUMP CONTROLLERS

This controller adopts the original imported microcomputer single-chip microcomputer technology, which has the advantages of powerful function and simple and convenient installation. The unique noncontact induction technology realizes the shutdown protection when the pump is dry and short of water without installing a probe in deep wells. Make the pump truly realize full intelligent unmanned management.

APPLICATION:

It used for water supply of urban high-rise buildings and drainage control of basements; It can effectively control and protect centrifugal pump, submersible pump, multistage pump, deep well pump, sewage pump, booster pump and pipeline pump.pump.

Type	IPC 122M/ IPC 130M – Single pump	
MODEL/RATED POWER	IPC 122 IPC 130	0,37-2,2 kW 0,37-3,0 kW
MODEL/RATED POWER	220+/-10% 50 Hz	
DISPLAY	LCD display	
START TYPE	Direct	
SIGNAL TRANSMISSION MODE	Level float switch Level probe Pressure switch Electric contact pressure gauge	
WATER LEVEL INDICATION	High/Middle/Low	
MAX. CONTROL DISTANCE	<=2000m without strong electric and electromagnetic fields	
OVER/UNDER-VOLTAGE RANGE	176-264V adjustable	
WORKING TEMPERATURE	-20°C - +50°C	
WORKING HUMIDITY	20-90% RH, no drips concreted	
INSTALL POSITION	Wall mounted	
PRODUCT SIZE	210x139x65 0,64kg	

MAIN FUNCTION:

- Transmission characteristic: Float switch, pressure gauge, pressure switch, electrode probe,
- Fault status: Fault cause display, fault sound and light alarm,
- Overcurrent/undercurrent parameter independent key setting (no-load delay start adjustable),
- After the over/under voltage is protected, it will start automatically after the voltage returns to normal,
- Water supply in upper pool, drainage in lowe pool and constant pressure control of pipeline,
- Digital voltage display, current display, upper/lower pool water level three-gear display,
- Pump stalled protection, Dry run protection, Overcurrent protection, Undercurrent protection, Phase failure protection, Overvoltage/undervoltage protection, Short circuit protection,
- Automatic/manual one-key switching,
- Power automatically starts the water pump after power failure,
- No-load restart: Adjustment range 0-999 minutes.

MAIN PARAMETERS:

- Anti-rust inspection time:
The adjustment range is 0-30 days,
- Trip response of dry run: 0,1s-3min.,
- Trip response of overload: 0,1s-3min.,
- Automatic fault conversion: 1s,
- Trip response of phase loss: <2s,

- Power automatically starts the water pump after power failure,
- No-load restart: Adjustment range 0-999 minutes.

MAIN PARAMETERS:

- Timing Rotation Time: adjustment range 0-480 minutes,
- Anti-rust inspection time: The adjustment rang is 0-30 days,
- Trip response of dry run: 0,1s-3min.,
- Trip response of overload: 0,1s-3min.,
- Automatic fault conversion: 1s,
- Trip response of phase loss: <2s,

FOR DOUBLE PUMPS SERIES IPC 2 M/T

- Control mode: One for use and the other for standby, double pump rotation (alternating operation), automatic error conversion and simultaneous running of dual pumps in very high level,
- Control functions: Automatic control, one for use and one for standby or two pumps start at the same time.

WATER PASS SWITCH

INTELLIGENT PUMP CONTROLLER

The WATER-PASS controller is an electronic device used to control the operation of the pump. The device controls the operation of the pump by examining changes in water pressure in the pipeline and water flow through the pipeline. Thanks to the user-adjustable switching pressure, the device fully replaces traditional pressure switches.

The device also protects against dry running (pump operation without water). An integrated check valve prevents the system from returning water to the pump.

WATER-PASS 2 in relation to WATER-PASS has been equipped with a 1L tank reducing hydraulic stroke. The turn on pressure is factory-set to 1.5 bar

The intelligent WATER-PASS controller is designed to control the pump by turning the device on and off. Operating depends on the water pressure, if the pressure drop in the water system below the switch-on pressure set on the controller, device will turn on the pump. In practice, the device turns on the pump when the water tap is turned on or the sprinklers are opened, and it turns off after about 6 seconds from the moment the tap is turned off or the sprinklers are closed. The device has a function of protection against dry running (operation of the pump without water), in the absence of water in the device, the controller turns off the pump preventing its destruction.

The device can operate pumps, equipped with the motors which do not consume more than 12 A current while working.

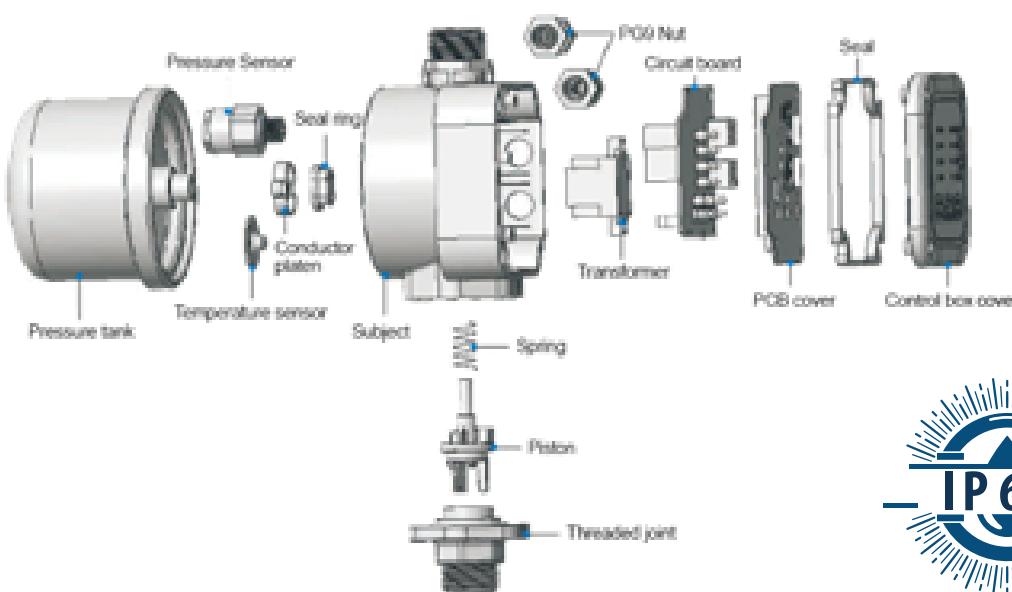

The device is designed to work with clean water without any mechanical sediments. The maximum water temperature should be less than 80 °C.

WATER-PASS 2 is equipped with a 1L tank and no additional tank should be installed. In order to increase the flexibility of the system operation, a small expansion vessel can be mounted on the WATER-PASS model.

TECHNICAL DATA:

- Supply voltage: 100-260V
- Power frequency: 50 / 60Hz
- Max. power of the controlled pump: 2.2 kW
- Max. current consumption of the controlled pump: 12A
- Max. operating pressure: 15 bar
- Max. ambient temperature "40 °C
- Max. liquid temperature: 80 °C
- Protection: IP65
- Switch-on pressure range: 0-10 bar
- Vertical working position
- WATER-PASS 2S - tank capacity 1L
- Printed circuit protection: epoxy resin
- Dry-running protection: 8 sec.

ELECTRICAL CABLES

H07RN-F rubber heavy duty power and control cable 450/750 V, for industrial and agricultural applications. Class 5, from -25°C to 60°C, oil resistant, flame retardant

Compliance: PN-EN 60228 / PN-EN 60332-1

FEATURES:

- Resistant to low temperatures
- Resistant to mechanical damage
- Oil resistant
- UV radiation resistant

APPLICATION:

- Hand and power operated equipment
- Medium mechanical loads
- Industrial and agricultural applications
- In dry, wet and humid environments

Depending on the batch, the dimensions may differ from the data specified below.

Nominal voltage	450/750V
Conductor material	copper
Number of conductors	3 / 4
Identification of conductors	Colour
Type of cores	Multi-strand (flexible)
Conductor insulation	Rubber (EPR)
Conductor class	Class 5 = flexible
Sheathing material	Rubber (EPR)
Permissible cable temperature	(-25) - (+60)
Sheathing colour	Black
Shape	Round
Sheathing	chloroprene rubber, oil resistant, flame retardant

Model (number of conductors x conductor diameter) (mm ²)	Number of conductors/ Sheathing colour	
	Service	Protective
	2 (brown, blue)	1 (yellow-green)

Pressure loss / discharge resistance when using galvanized steel pipeline.

Pressure losses along the 100 m horizontal section

Pressure loss when using a different pipeline (ratio) Cast iron pipeline x 1.4

Stainless steel pipeline x 0.8

Aluminium pipeline x 0.7

PE / PVC pipeline x 0.65
