

FIXLine vessels

Universal

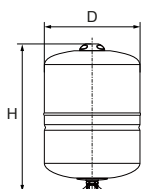

FIXLine membrane vessels are widely used in various types of installations. Inside the steel vessel is a non-replaceable BUTYL membrane characterized by high tensile strength and resistance to high temperatures, separating the liquid from the air space.

The vessels are equipped with a valve used to replenish the air pressure inside the vessel. The installed valve facilitates the control of the vessel's initial pressure. The vessels can be used for hot and cold water, as well as in heating systems.

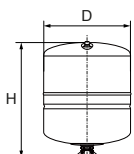

The vessels are designed for installations with a glycol content not exceeding 50%.

Application:

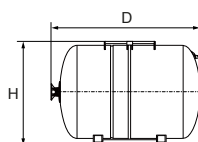

- Water stabilization and storage in hydrophore systems
- Pressure stabilization and equalization in water systems operated by inverters
- Pressure stabilization and equalization in central heating systems
- Pressure stabilization and equalization in domestic hot water systems
- Solar systems

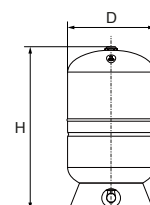

VERTICAL:
FIXLine 5 V
FIXLine 8 V
FIXLine 35 V

VERTICAL:
FIXLine 12 V
FIXLine 18 V
FIXLine 24 V

HORIZONTAL:
FIXLine 24 H
FIXLine 60 H
FIXLine 80 H
FIXLine 100 H

HORIZONTAL
WITH BASE:
FIXLine 100 V

EAN	Model	Operating temperature (°C)	Max. working pressure (bar)	Max. tested pressure PT (bar)	Pre-pressure (bar)	Connection (cale)	Dimension D (mm)	Dimension H (mm)
